The strength of Tamura's AC and DC power conversion families lies in providing consistently dependable products. All Tamura power and magnetic devices are designed and manufactured to deliver lower AQL levels, guaranteeing you the lowest incoming rejection rates you've ever experienced. For example, last year we shipped over **100 million transformers**– most to customers using a **ship–to–stock** acceptance program.

At Tamura, we're already life testing (not just designing) tomorrow's products– today. Over 100 design engineers at our technology center are dedicated to this task, assuring you of having the most up–to–date technology in your products. Today we are already designing the robotics to build these quality products, in high volume and at low cost. Over 150 product support engineers at 16 Tamura factories see to it.

Satisfy your AC and DC requirements for today and tomorrow. Contact Tamura for your specific requirements.

Tamura quality circles the electron world.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

eem MINIGLOSSARY POWER SUPPLIES

Ambient reference: Refers to the temperature of the still air surrounding the power supply

Case reference: One of the specs that make up the nominal rating. The temperature of the case with the temperature of the surrounding still air at a stated temperature (usually 25°C).

Crowbar circuit: Protects the load. A protective circuit that applies a short circuit across the output immediately upon overload. (See overvoltage).

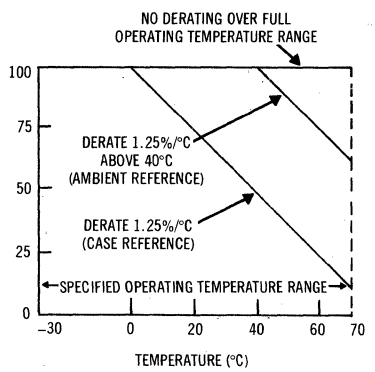

Fig. 1. Power output derating can be referred to ambient or case.

Derating: The degree output is reduced as temperature increases. Usually referenced to ambient case temperature and shown on a graph.

Efficiency: Ratio of the output power to the required input power. Usually expressed as a percentage given nominal environmental temperature.

EMI/RFI: Interference electronic circuitry caused by energy from electromechanical or radio frequency power supplies.

Foldback: Built-in protective circuits that automatically reduce the output voltage and/or current to very low levels in the event of an overload.

Holdover (Holdup): The interval that rated output will continue after input ceases. Usually milliseconds.

Input reflected current: The peak-to-peak alternating current generated by switching transients in DC/DC converters. Should not exceed 1%.

Inrush current limiting: Built-in circuits that monitor high currents through the rectifiers to the capacitors at turn ON. Circuit is usually inhibited as capacitors attain full charge.

Nominal rating: The spec value of the supply at stated conditions of input, output, and temperature.

Overshoot: A transient voltage change occurring during turn ON or OFF or during an abrupt load change.

Overvoltage (Overload) protection: Built-in circuits that protect the load or the supply by shutting it down or providing foldback.

Recovery: The time interval between the termination of an overload and restoration to normal operations.

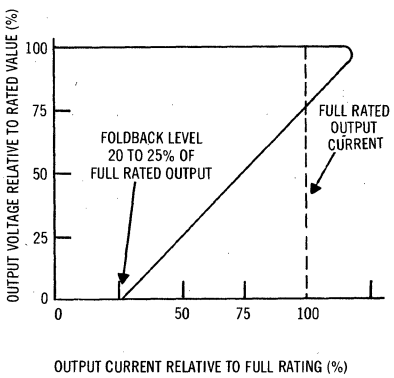

Fig. 2. Current foldback limiting self-resets with removal of fault.

Response: The time interval between a stated step change in input voltage or load current and return of output to normal operating conditions.

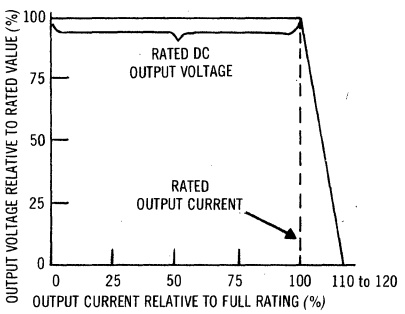

Fig. 3. Current limiting restrictions output current to a valve somewhat greater than full rated output; it resets when fault is removed.

Sensing: Regulation techniques that monitor output voltage and/or current. *Local sensing* refers to the output terminals. *Remote sensing* allows a feedback from the load circuit to the power supply.

Soft start: Allows the supply to start from zero current and/or voltage over a stated period of time during start up to prevent voltage overshoots and current imbalances.

Switchers: Power supplies using switching techniques to achieve high efficiency regulation. These techniques can have attendant EMI/RFI problems.

Tracking: The maintaining of fixed ratios between multiple outlets despite variations in line, load or temperature. Particularly important in supplies with symetrical (+)(−) outputs.

Transient protection: Circuitry designed to protect the supply from high amplitude line transients. Generally expressed in terms of peak voltage and maximum transient time duration.

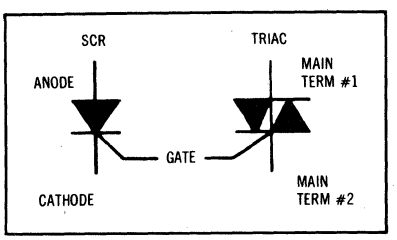
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors.* Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

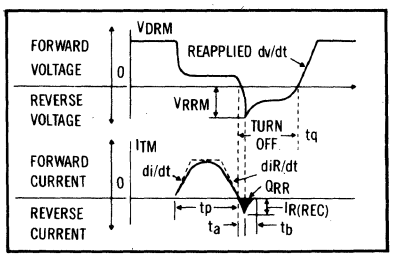


Fig. 1. Concurrent voltage and current waveforms

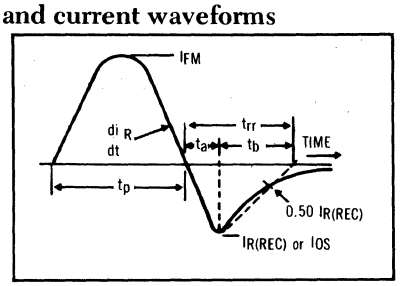

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature.*

$T_{J(MAX)}$: *Maximum allowable junction temp.*

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

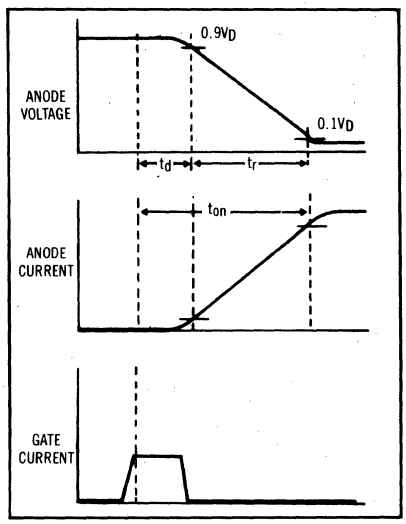

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time*. Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

Contact Rating
The electrical power-handling capability of relay contacts under specified environmental conditions and for a prescribed number of operations.

Delayed Interval Timing Function
Input voltage is applied continuously. The timing cycle is started by momentarily actuating the control circuit. The functions of separate Delay-On-Operate and interval type timers are combined in one package providing a single OFF-ON-OFF output cycles

Also called: single shot.

Delay-On-Operate Timing Function

Also called: Delay-On-Make, On-Delay, Delay Relay, Delay-On-Pickup.

Delay-On-Release Timing Function
Input voltage must be supplied continuously to timer. Actuation of control circuit causes relay contacts to transfer immediately. Time delay starts when control circuit is released. The relay remains energized for the duration of the time delay—then de-energizes.

CDM MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The opposition (in ohms) of capacitance to the flow of alternating current, equal to the reciprocal of the product of the angular frequency (2π times frequency in Hertz) of the current times the capacitance in farads.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The ratio of the capacitance of a capacitor with some material other than air between the capacitor plates to the capacitance of the same capacitor with air between the plates. For example, the dielectric constants of air, Teflon®, polystyrene and ruby mica are 1, 2.1, 2.6 and 5.4, respectively.

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

NEW Model 888

GATED LEVELING PREAMPLIFIER

• 10 kHz to 1 GHz • 30 dB gain control • Pedestal and blanking outputs • Front-panel rf level control, rf delay, threshold control

The remarkable new Model 888 preamplifier fulfills the needs of the most advanced rf laboratory for diverse control functions, in constant-field rf susceptibility testing, power-output control, modulation-envelope feedback, and simulation of voltage or current sources. Its blanking and pulsing control features make the Model 888 especially useful for NMR applications.

Accepts a monitor input voltage of any polarity (+, −, △) from a wide variety of sources, even including electric-field sensor systems or detected output of directional couplers. Versatile and delightful to use, the Model 888 is compatible with all Amplifier Research broadband power amplifiers, as well as with other amplifiers and rf sources within its wide bandwidth and power-handling capabilities.

AT Series antennas

Amplifier Research offers a wide range of antennas designed primarily for rf susceptibility (and emissions) testing in shielded rooms and free space.

The full line (Models AT1000, AT1100, and AT 1200 log-periodic, AT2000 Cavitenna®, AT3000 and AT3001 E-field generators, AT5000 E/H-field generator, AT4000 and AT4001 horns) covers a frequency spectrum from 10 kHz to 1000 MHz, handles input power to 3500 watts, and delivers field strengths as high as 1000 volts per meter.

NEW IEEE-488 Bus Control

New Model CP3000 provides isolated GPIB control for all AR amplifiers equipped with cabled remote-control capability. Optical isolation of all signal lines prevents power-transient and rf interference from reaching the control interface and the bus. Can fit inside the amplifier or be remote-cabled.

Directional couplers

The DC Series of high-power broadband directional couplers permits coupling of oscilloscopes, voltmeters, power meters, and spectrum analyzers to rf amplifiers and test systems, with 25 dB typical directivity. Dual-directional, they allow simultaneous monitoring of forward and reflected power—useful for amplifier leveling and load protection.

Five models cover a cw power range of 50 to 15,000 watts, at frequencies from 10 kHz to 1000 MHz.

Fiberoptic CCTV and Broadband Telemetry Links

For interference-free transmission of color or black-and-white video and broadband analog data from noisy or radioactive environments, the Scout CCTV FOL and the Sentinel and Sentry FOL data links from EOD are sold and serviced in the United States by Amplifier Research. Shielded to over 100 kV/m, both the CCTV and the data links are 100% fiberoptic coupled and battery-powered for 8-hr continuous operation.

Six decades of bandwidth up to 1.1 GHz give the Sentinel and Sentry FOL systems unsurpassed sensitivity to cw or pulsed analog data in the midst of hostile EMI or EMP conditions. All video and data systems are fitted for remote control.

Field Strength Monitor

• Isotropic response • Single E-field probe covers 10 kHz-1 GHz • Up to 4 independent probes • 1- to 300-V/m sensitivity

The new Model FM1000 Field Monitor revolutionizes EMC field measurement. Only the sensor probe(s) go in the shielded room. No need to change probes to sweep the entire rf spectrum to 1 GHz. LED display, multiple digital and analog I/O interfaces, adjustable high-field alarm—all controlled at front-panel keypad.

The Industry's Most Comprehensive Array of High Power/Voltage/Speed Operational Amplifiers

APEX MICROTECHNOLOGY CORP. offers the industry's largest selection of high voltage, high current, and high speed operational amplifiers designed to drive resistive, inductive and capacitive loads. For optimum linearity, most output stages are biased for class A/B operation.

PRODUCT LINE

APEX's product line consists of the highest power and highest voltage integrated circuit amplifiers in the industry. The WB05 and WA01 are unmatched in their combined ability to deliver currents from 400mA to 1A with bandwidths into the 40 to 80 MHz region.

The highest power integrated circuit power amplifier available anywhere is the PA03. For applications needing higher speeds at high power, such as sonar, APEX is the pioneer of MOSFET output power amplifiers with the PA04. In lower power applications the unique power boosters PB50 and PB58 provide wide MOSFET power bandwidths with the flexibility of allowing the designer to define input characteristics with their choice of driver op amp.

APEX is the unquestioned leader in high voltage thanks to our expertise in MOSFET technology. The PA89 at 1200 volts is the highest voltage integrated circuit op amp available anywhere. Piezo drive applications have made the 450 volt PA88 popular. PA85 provides 450 volt ratings along with a 500 KHz power bandwidth. APEX's leadership in high voltage continues with the PA41, the first MONOLITHIC amplifier rated at 350 volts. PA41 is the standard for high voltage amplifiers in the under 350 volt category.

APPLICATION

These hermetic integrated circuits provide the precision associated with Op Amps and the power of discrete multi-component boosters. This improves reliability, performance and cost. Key applications include: Motor Drives, Magnetic CRT Deflection, Programmable Power Supplies, Valve Control, Pin Drivers, Compact Audio Amplifiers and Piezoelectric Drivers.

The SPG Series of Wide Band Power Amplifiers have been the standard in the industry for over 30 years. Major applications for these amplifiers include Undersea Propagation Systems, Ultra-Sonic, Sonar and Audio Testing. Power ranges vary from 1KVA to 100KVA with frequency bandwidths from 100HZ to 10KHZ on standard units and between 5HZ and 200KHZ for custom requirements. Other uses include testing sonar transducers, hydrophones, undersea telephone, and mine detection systems. 2KVA and 5KVA amplifiers have been especially designed to fit into a 25 inch submarine hatch.

CML MACARR's SPG Series also have wide application in the industrial field including vibration test machines, audio power amplifiers, and the testing of inductors and capacitors. Commercial and military versions are also offered to suit individual requirements. Our application engineers will be happy to discuss specific needs.

SPG Series-Wide Band Power Amplifiers

SPECIFICATIONS

Output Frequency: Standard full power frequency range is 100-10,000 Hz except for Model A3K which has a 200-15,000 Hz range. *Other frequency ranges* between 5 Hz and 200KHz are available on a custom basis.
Output Configuration: 2 wire floating.
Duty Cycle: Continuous duty at full rated output power. Please consult CML MACARR for pulsed or intermittent duty ratings.

Harmonic Distortion: Less than 3%, 100-10,000 Hz; less than 1.5% mid-band.
Hum and Noise: At least 60 db below rated output tap voltage.
Output Impedance Selection: Taps are selected by link change. Front panel tap select switches are available at additional charge.
Input Service: Models rated 1KVA to 20KVA require 208/230 volts ±5%, 3 phase, 57-65 Hz. However, the Model S5K is also available with input of 440/460/480 volts, ±5%, 3 phase, 57-65 Hz—specify Model S5KM5963. Models rated at 30KVA output and higher require 440/480 volts ±5%, 3 phase, 57-65 Hz.
Signal Input Voltage: 1.0 volts RMS for rated output.
Signal Input Impedance: 600 ohms, single ended.
Keyed Operation: All models are suitable for operation with keyed input signals.
Metering: All models include complete front panel metering. In addition, models rated at 3KVA to 100KVA have recessed front panel section with test points for critical circuit parameters—to keep down-time to a minimum.
Protective Circuits: CML MACARR instantaneous overload circuitry protects both amplifier and load. Rapid front panel reset permits return to normal operation with minimum down-time.
Finish: Panels are satin blue enamel; cabinets are blue armorhide. Special colors are available on a custom basis.

Techron gives you power you can trust. Not just because we say so, but because we've been in the controlled power source business for over thirty years. And in that time, we've learned how to build the best industrial grade, high efficiency linear power amplifiers.

Our amps are ideal for applications where clean, reliable, DC to 50kHz, high-current power is required.

In fact, one of modern medicine's most important diagnostic tools, the Magnetic Resonance Imaging gradient subsystem, is powered by Techron. Our gradient amplifiers are the choice of major MRI manufacturers—because Techron's advanced engineering combines the efficiency you might expect from switchers with the clean signal of linears.

Techron amplifiers serve as the signal source for testing aerospace electronic systems, and are even used to power tables in vibration analysis systems. In addition, they can be configured as a line voltage generator system for computers or automated test equipment.

If you see the specifications you're looking for, call us. If you don't, call us anyway. Our engineers will be happy to discuss your application requirements, be they off-the-shelf or custom.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

PHI TECH

The Legendary Phi Deck... The Heavy Duty "Building Block" Cassette Tape Transport

Unequaled reliablity and flexibility have made the Phi Deck legendary as the tape transport of choice for custom configuration to handle the most demanding applications.

Our "building block" approach enables customers to specify virtually limitless customization – heads, motors, options, wiring harnesses . . . even internal electronics – while retaining the solid dependability and accuracy of the basic Phi Deck.

10,000-Hour Reliability

While most offshore suppliers – even Studer Revox – quote Mean Time Between Failures (MTBFs) of 500 to 1,500 hours, our Phi Deck customers routinely quote **minimum** MTBFs of 4,000 to 5,000 hours – and often as high as 10,000 to 12,000. In fact, the Phi Deck frequently outperforms other advanced technologies while offering significant cost advantages.

Winchester disk drives, for example, are quoted as having MTBFs of 10,000 to 20,000 hours. But disk drives often must run continuously, even when they're not being actively accessed.

By comparison, the Phi Deck operates only when information is being recorded or retrieved. Consequently, the Phi Deck tape drive, despite its lower MTBF, can significantly outlast the disk drive before requiring service.

Diecast Chassis

One reason for this is the chassis of diecast zinc that is the foundation of the Phi Deck. Diecast zinc is far more rigid than the plastic or sheet metal used by some manufacturers. It's even more rigid than aluminum – and maintains critical dimensions and close tolerances over a longer lifetime.

Other reasons for the Phi Deck's outstanding reliability include our unique pivoting headbar design that eliminates the need for continuous power to maintain head engagement, and our four-motor design that enables the Phi Deck to handle tape so gently that we even **encourage** the use of fragile C-120 cassettes when their longer playing time is advantageous.

Customized Engineering

The true strength of the Phi Deck, however, lies in our willingness and ability to **customize** our tape decks and systems to each customer's unique requirements.

We have configured the Phi Deck to meet and exceed exacting military specifications in numerous highly specialized applications, to fulfill critical life-or-death requirements of medical technology, to function in the harsh environment of oil well down holes.

We can customize the rugged, reliable, flexible Phi Deck to your needs as well.

PHI TECH

Description

Phi-Technologies **ComLog-1** is the most rugged, reliable multi-channel voice, analog and digital communications recording and reproducing system manufactured in the USA. It is mounted in a single cabinet. Operation is possible on a desk top, equipment rack, and mobile vehicle, airborne or at sea. This unit is commonly utilized in the C³I community.

Multi Speed/Multi Channels

The **ComLog-1** has been designed to provide up to 4 simultaneous record/reproduce channels. It records and reproduces at 15/16, 1 7/8, 3 3/4, and 7 1/2 i.p.s. user selectable.

RS-232-C/IEEE-488 Controllable

Recording can be on any good quality normal bias C60, C90, or C120 Compact-Type audio cassette tape. The **ComLog-1** has multiple control capabilities: manual operations from front panel, COR (Carrier Operated Relay), RS-232-C, IEEE-488, and via foot switch. Each input channel's signal level is independently adjustable. Audio output can be obtained from front or rear panels.

Phi Deck Cassette Drive

The **ComLog-1** utilizes the Phi Deck™. The Phi Deck™ is known worldwide as the most rugged cassette drive manufactured in the USA. Phi Technologies currently has over 250,000 Phi Decks in operation. Phi Tech cassette systems have long been recognized for reliability in harsh environments. The Phi Deck™ utilizes a patented pivoting-head engagement system and four-motor design with a MTBF of 3,000 to 20,000 hours depending upon the application. Phi Technologies's **ComLog-1** is available in Model 9000-059, and Model 9000-059.1 (operates with 12 Vdc power source). No other device in this market offers the combined features, functions, and benefits of the **ComLog-1.**

ICMASD...IC Alternate Source Directory

The all new 1991 version of the world famous Alternate Source Directory is now available in floppy disk form for your IBM XT & AT and 100% compatible personal computer with hard drive.

The **1991 ICMASD** contains the more than 180,000 listings that appear in the Alternate Source Directory Section contained in Volume Two of the printed version of the 1991 IC Master ...plus additional discontinued parts. The database includes complete vendor addresses and phone numbers.

You can personalize the **ICMASD** for your application. The program allows you to add comments, up to 20 digits long, to each listing. These comments can be part numbers, prices, or any information specific to your needs. You may also add, delete and/or discontinue devices!

For greater flexibility the base number search feature enables you to access parts by base number, i.e., the device number stripped of prefixes and suffixes. You don't need to know the manufactures codes to call up any of the alternates to these devices.

The **1991 ICMASD** is fast, convenient and very user friendly!

Complete program documentation is included. When ordering, be sure to specify if you want the **1991 ICMASD** on three, double-sided, double-density disks OR on one high-density disk.

For immediate delivery you can order the **1991 ICMASD** at $179.50* simply by charging your Visa or MasterCard credit card. To place your order or for more information, call or write:

FOR THE JAPANESE, *SHOKAI* MEANS INTRODUCTION

WHAT DOES *SHOKAI* MEAN FOR YOU? (HINT: IT MAKES YOUR IDEAS PROFITABLE)

Let's face it. As a source for electronic and electromechanical components, the quality and pricing of the Far East can't be matched on our side of the ocean. But you can't go to the Far East whenever you need to source a product.

That's why, if up to now, your knowledge of Japanese was limited to "sushi" and "sayonara", we respectfully suggest that you learn another word . . . SHOKAI®. . . Your introduction to the Far East.

SHOKAI® is an American company, with over 30 years experience manufacturing and importing components from the Far East. We were serving American manufacturers long before everybody with a fax machine and a foreign telephone book could claim to be an overseas supplier. And we will be here long after they are gone.

We speak your language. We understand you - your time frames - your requirements - your problems – the quality and personal attention you and your customers demand. As hundreds of "Top 500" companies have learned, let SHOKAI® be your source for components from Japan, Taiwan, Hong Kong and the rest of the Far East.

OUR PRODUCT LINE INCLUDES:

SEALED VERSION FOR WAVE SOLDERING

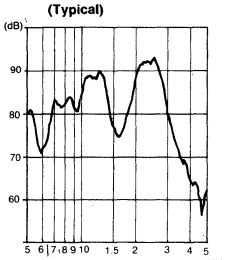
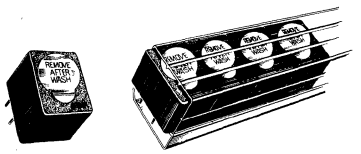
SMX SERIES

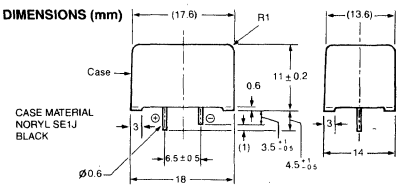
CHARACTERISTICS (Typical)



Frequency Response

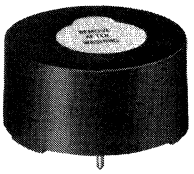
Test Conditions: Rated Voltage, Square Wave 50% Duty Cycle at 10cm.



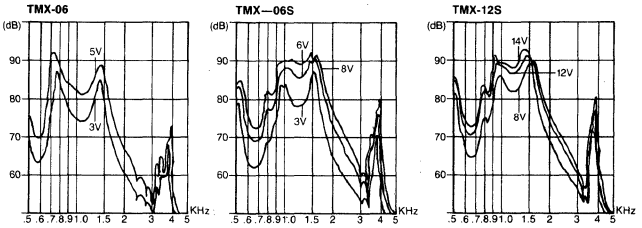


The Star SMX Series, a completely sealed audio transducer, is designed to provide an exceptionally wide frequency response range. A consistent pure tone signal allows the SMX to be used in a variety of applications. SMX transducers are also the first audio components specifically engineered to meet the requirements of automatic printed circuit board production. Forty SMX transducers are packaged in a rigid, plastic easy-feed magazine compatible with automatic insertion equipment.

TMX SERIES



CHARACTERISTICS



The charts above represent the SPL characteristics plotted at minimum and maximum operating voltages throughout the frequency range
TEST CONDITIONS: Square Wave, 50% Duty Cycle, measured at 10cm.

The Star TMX Series are electro-acoustic transducers designed to produce a more pleasing, low frequency tone as an output. The TMX-06 is resonant at 730 Hz while the TMX-S models provide optimum performance between 1KHz and 1.5KHz. The basic TMX is available in only a nominal 5V DC package; the "S" type has nominal DC ratings of 6V and 12V.

MMX-01C

The MMX-01C is an ultra-miniature electro-magnetic audio transducer and the smallest produced by Star. Its small size (9.6x7.1mm) make it a perfect choice for applications with space limitations.

AUDIO TRANSDUCERS WITH BUILT-IN DRIVE CIRCUIT

This series of transducers features built-in oscillation circuits to drive each unit at the correct frequency. They also allow operation from a direct voltage source and can replace older arcing type buzzers. The "pure tone" signal is at a basic frequency of 2200 Hz and is pleasant yet penetrating enough for alert/alarm functions.

BUZZERS AND TRANSDUCERS

BUZZERS MINIATURE SOLID STATE ELECTRONIC

Star's electronic buzzers utilize their patented solid state design and precise manufacturing that has made Star the world leader in this technology. The built-in oscillator circuit provides consistant sound output and eliminates RF noise associated with electro-mechanical design.

MMB - 01

Star's MMB series is the state-of-the-art in miniature eletronic buzzers. Tiny size, high efficiency, and value are obtained through use of surface mount components in the drive circuits. As all circuitry is solid state, the MMB's simplicity of design provides high reliability not found in conventional "make and break" type alarms. There are no mechanical points to arc or require maintenance, and RF noise is non-existent.

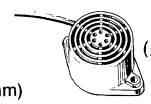
Star series CMB pin-type electronic buzzers fit standard DIP sockets or may be wave-soldered. Model CMB-06 is TTL compatible; Model CMB-12 is CMOS compatible. MMB and SMB series have lead wires.

RMB/IMB Series

IMB (⌀41mm x 28mm)



RMB (⌀41mm x 17.6mm)

Extraordinary audio penetration, long life and compact, rugged construction are combined in Star's unique Series of miniature electronic buzzers. Because all circuitry is solid state, Star buzzers differ significantly from conventional "make and break" type alarms. There are no mechanical points to arc or require maintenance and RF noise has been eliminated.

All three of the IMB Series are available in two models with different sound sequences.

- IMB-06-05, IMB-12-05 and IMB-24-05 emit sound for 1/4 second on, 1/4 second off.
- IMB-06-10, IMB-12-10 and IMB-24-10 emit sound for 1/2 second on, 1/2 second off.

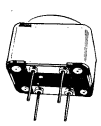
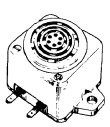
YMB/PMB Series



YMB (26L x 26W x 20H)



PMB (40L x 26W x 20H)

Star Series YMB and PMB are low-cost, precision-engineered solid state electronic buzzers which provide a minimum audible signal of 75 dB at a distance of 1 meter (39.4"). Each is available in four models rated at 3, 6, 12 and 24 volts DC. The YMB and PMB are similar in operating characteristics and performance, but provide different assembly options: Series YMB is a pin-type buzzer designed to be soldered directly to PC boards without additional wiring. Because the pins include a control, or "trigger" terminal with a maximum starting current of 1 mA, the buzzers create a perfect interface with integrated circuits. The control terminal is logic compatible. Series PMB has connector tabs which may be soldered or inserted in crimp-on connectors. It has flanges with screw holes and may be mounted firmly on any rigid, non-resonant surface.

DESCRIPTION

The GRIM PROCOM Communications System provides operator access to a variety of voice equipment and communication, including intercom, radio, and telephone. The system is also capable of handling digital data communications.

The basic design and operation of the GRIM PROCOM Communication System is flexible and adaptable to meet customer specifications. Functions and features can be changed, deleted, and added.

The GRIM PROCOM Communication System consists of two types of components. The Communication Access Unit (CAU) is the operator terminal and allows local access to and control of the communications equipment and external lines. The Communication Control Unit (CCU) is the focal point of the system, handling the communication between operator terminals, various communication equipment, and external communications lines.

APPLICATIONS

The PROCOM 1400 can be used in a wide range of applications from two stations to 999 plus depending on the number of keypad digits desired. This capability is derived from the flexibility of the software (EPROM), and the keypad dial-up feature allowing specific address transmission via the digital interface bus.

With this capability in mind, one can realize the numerous system configurations that can be constructed, providing intercommunications for the small system user up to the most elaborate.

Typical applications would encompass:

- Industrial/Commercial installations
- Communications Shelters
- Training/Simulation Systems.

- Transformer-coupled, balanced/unbalanced inputs and outputs
- 200 to 5,000 Hz ± 1dB response with optional path gain
- Optional battery retention of connectivity memory

GENERAL DESCRIPTION

The 8300 Series Audio Switches provide the capability to connect any of the switch audio input lines to any or all of the switch audio output lines using a solid state non-blocking crosspoint matrix. All input and output lines are transformer coupled and buffered presenting constant input and output impedance and constant output signal level regardless of the crosspoint connectivity. Microprocessor control of the audio switch provides fast local and remote control, interrogation, fault detection, and fault isolation. All switching actions are verified providing fast automatic non-obtrusive fault detection. The high quality of the signal paths provided by space-division switching and the reliability of all solid-state construction permits application of the audio switch in severe government and industrial environments for complex intercom networks, voice logging/playback or training/simulation systems and airspace management applications.

MODULAR CONSTRUCTION

The 8300 Series Audio Switches are composed of the following card sets:

- GPS Microprocessor – provides control, stored program, memory, and remote communication.
- Audio Input Cards – 8 lines per card, maximum 96 inputs.
- Crosspoint Matrix – 16 x 16 per card, 36 cards for 96 x 96.
- Audio Output Cards – 8 lines per card, maximum 96 outputs.
- I/O Backplane – 4 input/output/matrix card interconnect, minimum 3 for 32 x 32 switch.
- Card Shelf – 20 card slots.
  - 1st shelf – GPS and slots for up to 32 x 32 line switch, or GPS and slots for up to 96 output lines.
  - 2nd, 3rd, 4th shelf – slots for up to 32 input lines and 32 x 96 matrix.
- Power Supply and 19 inch rack mount chassis.

LOCAL CONTROL

A 16 keypad and 8 digit annotated display allows the operator to monitor switch fault detection (errors), determine connectivity, connect/disconnect any input from selected output, select and execute fault isolation tests, and monitor test results. Operator entry is prompted with periods(.) in the appropriate fields and line numbers are range verified to minimize human errors.

REMOTE CONTROL

A jumper selectable RS-232C/RS-422 Serial Line, with full modem control, provides total remote control capability of the Audio Switch by a host processor or any standard terminal with ASCII communication capability. Communication protocol is asynchronous with switch selectable baud, parity, and stop bits. The Audio Switch is unit addressable allowing multiple Audio Switches to be controlled by a single serial port in a multipoint communication network. Communication error control and syntax validation prevents erroneous configuration of the switch. All functions can be performed remotely including configuration, connectivity interrogation, fault detection, execution of fault isolation diagnostics with remote reporting, and test sequence loop construction.

DESCRIPTION

The IVDM-100 Series Modems are "Smart" voice and data acquisition, control and transmission systems. With many built-in features, the IVDM-100 Series Modems allow stand-alone operation in complex applications. IVDM systems are especially useful when simultaneous voice and control data transmission is required.

FEATURES

- Simultaneous transmission and reception of Voice and Data.
- Basic 2002/3002 4-wire or 2-wire telephone facility compatible, microwave, or other transmission.
- RS-232C bi-directional port with data rates to 600 baud. (Front/Rear Access)
- RS-422-485 multidrop serial port for interfacing multiple equipment. (Rear Access)
- Sixteen (16) digital control inputs/outputs.
- Eight (8) Radio control inputs.
- Six (6) Opto-isolated control outputs.
- Fifteen (15) Analog 0-5V level inputs.
- 2 x 6 built in audio switch.
- Front Panel Status LEDs and Monitor/Test Jacks.
- Automated digital and analog loop back.
- Automatic transmission line compensation over 50dB range with degradation reporting.
- Transparent orderwire with priority override.
- AC and/or DC source powered.

The Audio Subsystem features the following:

Frequency
The audio bandpass is 300 Hz to 1800 Hz + 1/-3 dB.

Audio Input/Output
The audio can be input on any of six lines and output on any of six separate lines. The inputs and outputs can be switched on and off in any combination under firmware control. They are normally configured as a "one of" input and output on a demand priority basis. The lowest priority channel is assigned as intercom/orderwire.

Interface
Audio interface is through a 600 ohm balanced transformer on each input. A trimpot is provided to adjust volume level. Each output is buffered by a separate amplifier and transformer coupled with a 600 ohm impedance.

Loopback
Remote audio and digital features are provided by switch selection or under firmware control.

The Digital Subsystem features the following:

Digital Inputs
The IVDM-102 has 16 non-isolated digital inputs. They are ground referenced and switch with a positive input voltage between 3V and 15V. These inputs can be tied to + V through a resistor allowing them to switch with a ground input.

There are 8 additional control inputs typically used for standard radio functions such as PTT, muting, and main-standby selection.

Analog Inputs
The IVDM-102 includes 15 analog inputs of 0 to 5 volts with a resolution of 0.02 volts. The data from these inputs resides in memory and is available for read-out on demand via the RS-232 or RS-485 data port. Although the normal configuration is for read, report, and output, interactive use and alarm monitoring can be implemented in firmware.

Outputs
There are 16 non-isolated digital outputs capable of sinking 0.5 amps.

There are 6 additional opto-isolated control outputs. There are normally configured in firmware for radio PTT.

RS-232 Port
A multifunction RS-232 Port is included in the system. It is normally a transparent through channel that does not effect other functions. On demand, the port is used to access analog and digital operational data stored within the unit's memory. It can also be configured to interact with and control the system functions.

RS-422/485 Multidrop Port
An RS-485 multidrop serial port is included in the IVDM-102 to allow data access and functional surveillance/control of multiple IVDMs or other external equipments on a common computer port.

Memory
The system uses non-volatile memory to store incoming data and system parameters. The memory operation is totally automatic and will remain valid in excess of 10 years.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

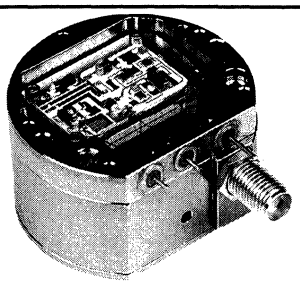
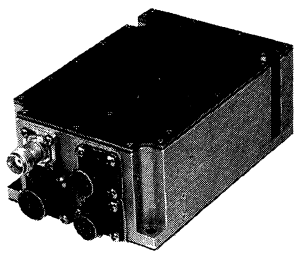
QUALIFIED SUPPLIER CERTIFIED TO MIL-Q-9858A AND MIL-STD-2000 TASK G

S-Band Transmitter



A 2.2 to 2.4 GHz transmitter available for use in Hi-G applications to 30,000 G's. Phase modulation to a modulation index of 5 with rates from 10 KHz to 5 MHz. Power output in excess of + 23 dBm. Optional configuration available to provide bi-phase modulation with a 10 MHz bit rate. Small size resulting from in house hybrid micro-circuitry development.

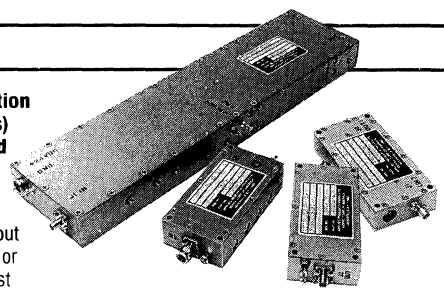
Flight Termination Receiver



FM solid-state UHF band remotely operated receiver, receives an unmodulated RF signal under normal conditions. In the command state, two or three frequency modulated tones are decoded to provide monitor, arm and terminate commands. Optional configuration provides demodulated signal as an output.

RF Multipliers

Frequency generation through multiplication or phase-lock techniques (A thru J bands) for shipboard, airborne and ground based units.



If your system requires low additive phase noise, wide bandwidth (10%), high power output (10 watts) and multiplications from X2 to X144 or greater, Servo has the design to meet your most stringent requirements.

- Custom Sizes
- Multiple Outputs
- Various Primary Power Sources
- Multiple Selectable Outputs
- Custom Multiplier Chains

At last: A complete GPS station clock under $10,000

Everything you want in a GPS station clock, in one neat box:

- **GPS receiver**
- **Disciplined standard**
- **Multiple output timing signal generator, and much, much more.**

What do you expect from a company with more than 30 years of production and field experience in the timing business? You'd expect a one-unit master timing station, capable of tracking six satellites simultaneously — even while moving at 1,000 miles per hour — all inside a 3½ inch rack-mount chassis.

That's the **Model 8810** — a mature product, value-engineered and time-tested, just like the ones we've been providing to NASA and DoD for decades. And there's so much built into this unit, it's hard to describe. Just review the features listed below:

- Automatically determines geographical coordinates — no need to enter position anywhere on earth
- Automatic multi-satellite acquisition
- Time accuracy maintained with platform velocities to over 1,000 mph
- Outputs position data whether stationary or moving
- Multiple time code and rate output options
- User friendly, menu-prompted setup
- 20-key keypad and 4-line, 40 character display allows complete operation, checkout, and status acquisition without ancillary equipment
- Nonvolatile memory stores setup and data indefinitely
- Accurate to within 100 ns worldwide, 24 hours a day
- RS-232 remote control and time output (optional IEEE-488 output)
- RS-232 printer port
- Displays time, position, and REF-UTC/GPS
- Time display is keypad-selectable to UTC, GPS, or local time
- 115/230 VAC with optional 24 VDC backup
- Antenna with 50′ coax cable included
- Built-in test routines
- Fully modularized
- GPS receiver is drop-in replaceable
- Workmanship standards to MIL-STD-454
- Three-year limited warranty
- Plus, a host of desirable options

That's the **Model 8810,** from TRAK Systems. And at this price, there's nothing else like it on the market. So why pay more, and install boxes of equipment, when you can have it all in one neat unit?

A complete printer normally includes a print mechanism and a control board.

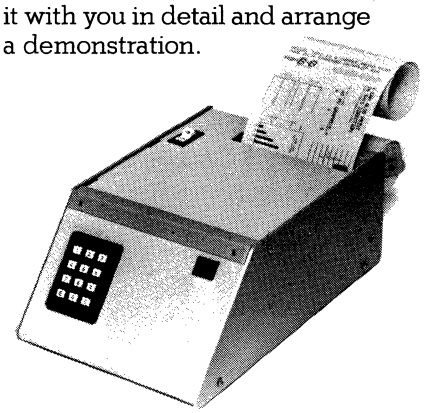
Reliable. All B-G Instruments' printers use fixed-dot, thick-film thermal printheads to achieve fast, quiet operation, long life and reliable performance.

Powerful. B-G's standard DataPlot software makes it easy to print across the paper, print down the paper, and print while you plot data. Simple plotting commands produce curves, grids and bar graphs directly from the input data.

Versatile. For a moderate one-time fixed charge, any B-G printer can quickly be reprogrammed to meet the special requirements of a specific application. Custom character sets, printing stored forms with inserted data, clock/calendar functions, special calculations, conditional operations, these are but a few of the many features that have been included in specially programmed B-G printers.

Custom Instruments. The recording thermograph shown above is built around a DataPlot 1224-V printer with a custom control/interface board that performs A/D conversion, corrects for thermistor non-linearity, drives a panel display and provides the entire logic system. May we design an instrument for your application?

More Information. Detailed brochures, a price list and sample printouts will be mailed to you as soon as we receive your inquiry. If you have an upcoming OEM application, we would be pleased to discuss it with you in detail and arrange a demonstration.



Cabinets and power supplies are also available.

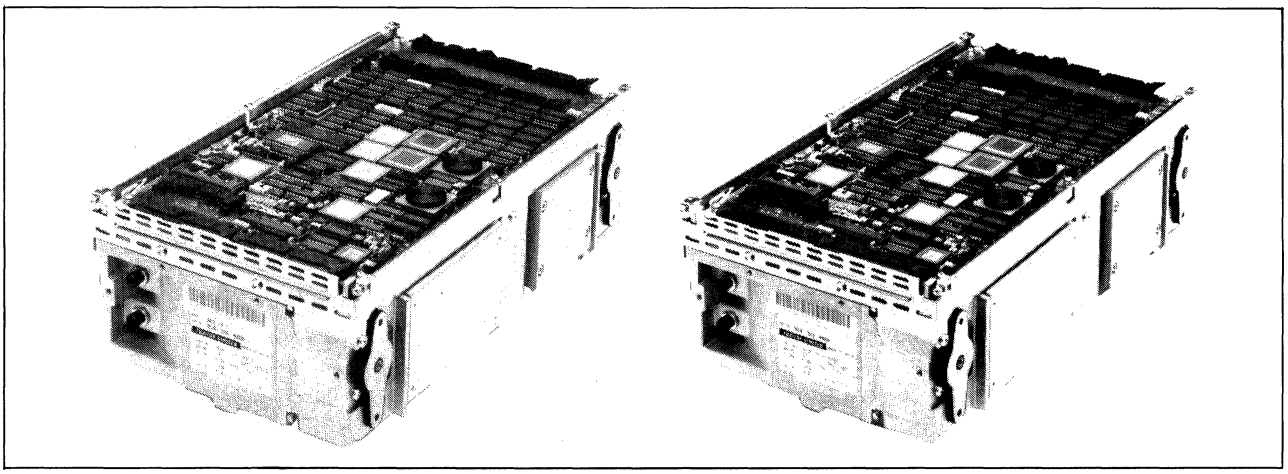
FUJITSU 8" WINCHESTER DISK DRIVES



OVERVIEW

Fujitsu's 8" WInchester disk drives feature large storage capacity, fast access, and superb reliability. They are designed to provide cost-effective storage for small computer systems and high performance workstations.

The M2392 has the highest reliability rating in the industry—200,000 hours MTBF—providing maximum uptime and minimum downtime. The M2382 provides the new performance ESMD transfer rate of 3.0 Mb/s, substantially increasing I/O throughout.

Two drives can be mounted side by side in a 19-inch rack to provide increased storage in a compact package. Dual port is embedded so that one drive can be accessed by two computers.

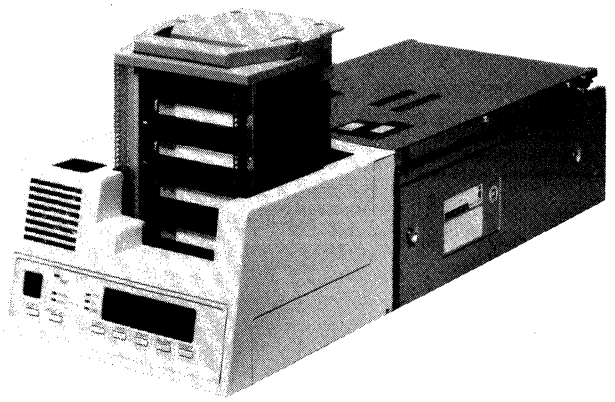
FUJITSU 3480-FORMAT COMPATIBLE TAPE DRIVES



OVERVIEW

Workstations, minicomputers, mainframes —any system processing high volumes of data—requires back-up daily. But, it's not that easy. The need to transfer information amongst a variety of computer platforms compounds the problem.

A new tape standard has emerged to address this situation: the half-inch 3480 tape cartridge format. It is convenient, well-adapted to high-volume backup and archiving, and permits true data interchange between a variety of computer systems.

No other manufacturer offers a more elegant 3480 solution than Fujitsu America. We've reshaped the 3480 into something better: the Fujitsu M2480 tape subsystem.

Now the 3480 choice no longer means a bulky unit. The trim M2480 tape drive and controller slip right into any standard 19-inch rack. All controls are easily and immediately accesible.

Its new shape and SCSI interface also make the M2480 the ideal—and simple—way to add all the benefits of the 3480 format to systems presently using 9-track GCR units.

You can order the M2480 with either a 1.5 MB/sec or 3.0 MB/sec native transfer rate. These rates exceed that of traditional reel-to-reel units. A proprietary Fujitsu data compression algorithm adds a new dimension to both. With the 1.5 MB units, compression effectively doubles the transfer rate to 3.0 MB/sec. The same option with the 3.0 MB version allows you to push the transfer rate right up to the SCSI limit of 4.0 MB/sec! As an added bonus, in both cases, the capacity of your cartridges increases to an average of 400 MB.

The tape cartridge approach eliminates extra tape-handling steps. Now, Fujitsu eliminates a few more: one of the options the 2480 gives you is an Auto Cartridge Loader. This attachment allows unattended operation with optional five- or ten-cartridge magazines. Using the ACL and compression, it is possible to back up as much as 16 GB of data in approximately an hour.

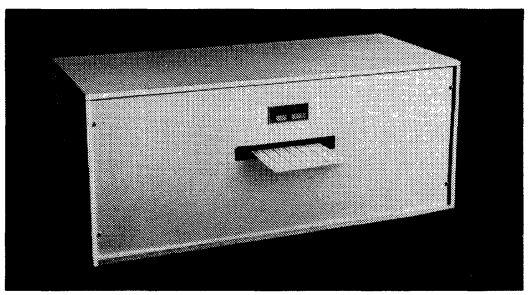
Punched Card Readers

Serial... Serial/Parallel...

High Reliability Heavy Duty Card & Badge Readers— for industrial use since 1956

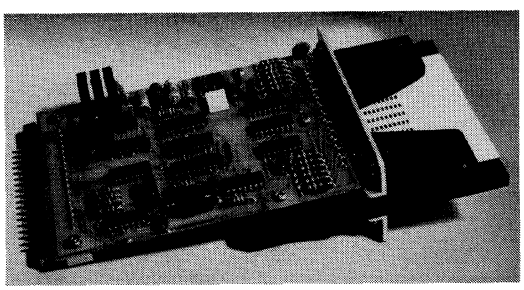
A complete line of readers for OEM, system and industrial applications



Serial Readers—Micro Processor Controlled

RS 232 or Current Loop
Easily Field Modified—with socketed proms
Flexible Application—card handling modes and read out rates in BAUD are jumper selectable
Self Contained—cabinet or rack models
Thorough Documentation

Designed for industrial environments, these devices are very rugged and usable in conditions that are not suitable for ordinary card readers. They are ideal for a multitude of uses including OEM and systems applications in warehousing, data handling, industrial and process control, and manufacturing. They are microprocessor controlled so operation and read out are flexible. Field reconfiguration is simple and inexpensive.

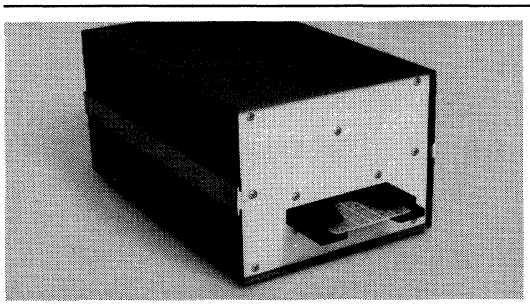


Badge/Card Readers... Series H

Read cards/badges of up to 12 rows and 10 to 68 columns. Optical reading with no moving parts, error-free readout, long life, minimum maintenance. Completely self-contained. To operate, insert badge or card fully and withdraw. Readout is character (column) serial, bit (row) parallel.

Can easily replace less satisfactory readers in existing installations. Designed for OEM and system applications. Custom-feature models can be supplied.

The 10-column Model H-10 is pictured. For complete details on our complete badge/card reader line, request Series H Catalog. Patent No. 4,132,352



Series H Readers with RS232C or 20ma Loop Interface

Series HT are complete, self-contained manual Card or Badge Reader terminals designed for industrial applications in factory data collection systems, warehousing assembly floors, and the like.

Completely and thoroughly documented, they are particularly well suited for system developers who require an inexpensive, flexible terminal for low to moderate usage, or where a manual terminal is suitable. Because the terminals are micro-processor based, their application is extremely flexible, and modifications to meet particular system requirements are simple and straightforward.

Star printer mechanisms are all guaranteed for 100% reliability. They're compact, easy to install and inexpensive to maintain.

The MP300 Series mechanisms offer quiet operation at 3.2 lines/sec. The simple stepping motor paper drive offers full graphics capability, and reliability is in excess of 5 million lines.

822-20 column dot matrix printer mechanism has a 7 wire head that enables it to print 2½ lines every second. It prints on standard 2½" adding machine tapes and provides unusually strong printing impact.

824-40 column dot matrix printer mechanism has a 5 x 7 standard matrix array. It prints 60 cps and can provide a variety of printouts. These include standard 4½" adding machine tapes and double stock carbonless tapes. For fanfold and labels, all that's needed is an optional tractor feed.

832-22 column dot matrix printer mechanism has a 9 wire head to produce characters with true descenders. Its two color bidirectional printing make it ideal for applications requiring print speeds of 3 LPS.

834-40 column dot matrix printer has 5 x 9 or 9 x 9 dot array. It prints on carbonless two copy (1 original plus 1 copy) paper as well as 4½" stock. Models with sprocket feed are also available.

Plus, there's a selection of replacement print heads, control boards, ribbon and paper supplies available. All with the Star name on them and behind them.

USER NOTES

The printer operates in two modes selectable from the front panel. The modes are Roll Mode and Forms Mode.

ROLL MODE:
This mode is intended for operation with cash register roll type paper, and is normally used for printing receipts. The roll paper width is DIP Switch selectable. The printer command set is a super set of the commands used in the Star Micronics receipt printers. This will provide compatibility with existing software.

FORMS MODE:
In the forms mode, the printer is usually operated with standard 8½ x 11 fan folded paper, and can be used for the End of Day report printing. The printer command set will be compatible with any software designed to operate with the Star command set used in the 80/136 column printers. Using the Condensed Elite mode, the printer can produce as many as 160 columns.

CASH DRAWER DRIVERS
A dual cash drawer is provided, that will allow the use of simple "solenoid only" cash drawers. This will save the cost of the electronics required to connect the cash drawer directly to the computer communication, or printer port. As the printer and cash drawer both operate from the same parallel port, it will often free up ports for other peripherals such as bar code scanners, and other communications devices.

Timing Instruments

Bancomm manufactures a variety of rack mount timing instruments that utilize bus level modules packaged in a dedicated chassis. The **M80T Controller** performs a wide variety of time code translation, generation, and tape recorder control functions using plug-in STD bus modules. It has space for five optional modules and features a front panel CRT alphanumeric display for programming and data display. The **M80XT Controller** is similar; however it uses PC XT bus modules, can accept 12 optional modules, and features a front panel vacuum florescent display. The **M80T Sequencer** is a special configuration of the **M80T Controller** which maintains a countdown clock and initiates 16 external test events with millisecond resolution. The **M48 Controller** is another special configuration of the **M80T Controller** which generates and decodes time data inserted into and recovered from the M48 data block within AMPEX Corp High Density Digital Tape Recorders (HDDR).

TYMCOR® Time Base Correctors

The TYMCOR® line of digital time base correction products all serve a common objective - to reduce the effect non-constant tape speed has on data recorded and reproduced by instrumentation recorders. Bancomm has supplied a number of custom time base correctors for linear instrumentation recorders, cassette recorders, and rotary head machines. The keystone of the division's standard product line is the **TYMCOR® 1400 Digital Time Base Corrector**. This unit is compatible with any standard wideband linear instrumentation recorder and offers an order of magnitude improvement in time base error performance.

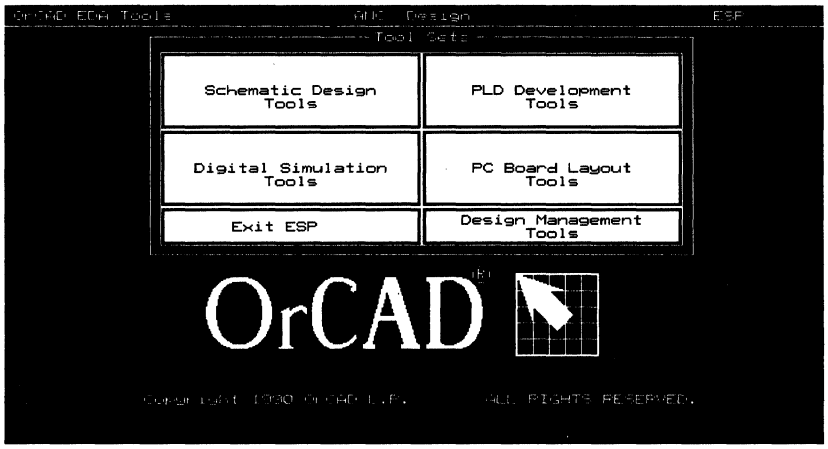
Release IV



OrCAD offers the ESP framework.

Our schematic design tools are known for being the best price/performance value in the industry. Its one reason why more designers use OrCAD products than any other electronic design automation tools in the world. With the introduction of the Release IV products, OrCAD introduces ESP: a graphical user interface designed with the EDA designer in mind.

Schematic Design Tools

With Release IV of Schematic Design Tools, OrCAD now offers the **ESP framework**: the best way to move information from one application to another seamlessly and easily. The updated product also includes over 20,000 unique library parts, EMS support, more printer/plotter drivers, unlimited netlist formats with over 30 predefined outputs,l macros, support utilities such as ERC, BOM, ANNOTATE, LIBLIST, and many new features.

Digital Simulation Tools

With the ESP framework, moving from schematic to simulation has never been easier. OrCAD's "push button" interface folds complex processes into single actions and the improved software decreases the design iteration time dramatically. This full featured timing-based simulator on the PC has been benchmarked against workstation based products and found to be superior.

Programmable Logic Design Tools

OrCAD offers the best solution for working with programmable logic devices. Programmable Logic Design Tools accept several forms of input including schematic, Boolean equations, truth tables, state machines and several forms of logic synthesis. Output can be JEDEC or hex format.

Printed Circuit Board Layout Tools

One low price includes autorouting, autoplacement, large library of modules, SMT support, design rule checking, printer/plotter drivers, Gerber/NCDRILL output and much more. Updated software allows for much larger designs.

DESCRIPTION

Bell Current Sensors are small, lightweight, inexpensive devices for non-contact current measurements to 3000 A dc or peak ac up to 200 kHz.

The sensors are non-contact. Hall-effect devices, offering no dc insertion loss, power loss, isolation or heating problems.

The Hall-effect sensor is a four-pole, magneto-sensitive device mounted in the core gap, and reads the magnetic field surrounding the conductor passing through the gap. The field is proportional to the unknown current, and the output voltage of the Hall generator is proportional to this magnetic field, thus proportional to the current.

Various units in the broad line of F.W. Bell current sensors find applications in the automotive, aerospace, industrial and power generation fields.

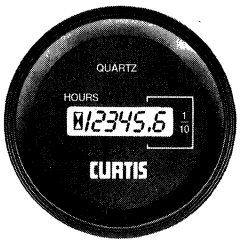
CURTIS 700 SERIES SOLID-STATE HOUR METERS



Designed to outlast the equipment they monitor, 700 Series hour meters cost less than units they replace. Built with customized, dedicated microchip technolgy, they are crystal quartz-driven with totally solid-state circuitry. Housed in a sealed module with LCD readout, they have *no moving parts*. Available for DC or AC, their non-volatile memory holds data *without battery or power* for as long as required. CURTIS 700 Series tolerate extremes of shock, dust, vibration, moisture and temperature (-40°C to 85°C). Shallow-depth housing permits easier installation. Voltages from 6VDC to 220VAC (50, 60Hz).

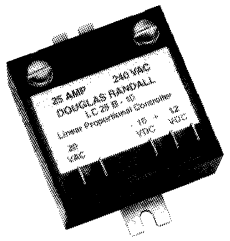
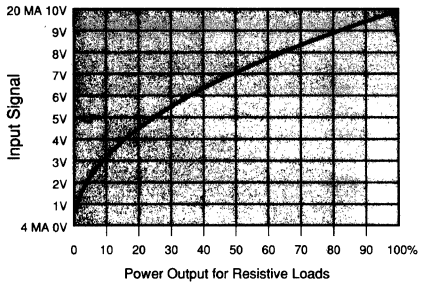
L.C. SERIES POWER CONTROL MODULES—PROPORTIONAL CONTROLS



OPTICALLY COUPOLED PROPORTIONAL CONTROL



The optically coupled Douglas Randall L.C. series power control modules utilize D.C. analog control signals to proportionally control loads up to 100 amps, 300 Vrms. Changes in input signal linearly vary the firing angle of the thyristor load control device, so only the portion of the sine wave between the firing of the thyristor and zero crossing is available to the load. (see graph 1 on reverse). Average power output versus input voltage/current for resistive loads is shown in Figure 2 on reverse side of this sheet.

The NEW INDUSTRY STANDARD in ETI technology . . . with CMOS microelectronics that delivers precisely controlled power to the patented stepper drive module. Summarily, a remarkably efficient system that has proven its versatility. For example, Models D76 and TTL-compatible D46 are proven performers from logic buss or low-voltage DC power. Or take advantage of Model D16's stability between 10 and 34 VDC. It is now qualified to new MIL-M-7793E, as is the down-sized 60 Hz Model D92. All are POWER MISERS, with expanded voltages to match today's tougher equipment specs. And the SHORT CASES will SAVE SPACE, too. That's DYNATIME versatility . . . you can rely on it.

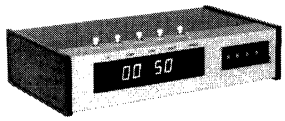
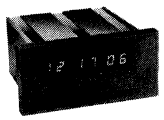
CLOCKS and TIMERS



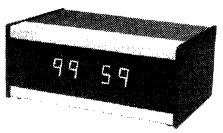
ES 362A Master Up/Down Timer
The **ES 362A** is a four digit, one hundred minute Up/Downtimer with serial output, will drive up to 100 up/down timer serial slaves, such as the **ES-361, ES-366F, ES-369 or ES-372.**

70 SERIES Console-Mount Clocks and Timers



ES 172 Six-Digit, 12 Hour Clock, ES 174 Six-Digit, 24 Hour Clock, **ES 370** Four Digit, One Hundred Minute Up/Down Timer, **ES 371** Up/Down Timer, **ES 570** Four Digit, Sixty or 100 Minute Timer, **ES 572** Six-Digit, 12 Hour Clock or Timer, **ES 574** A 24 Hour version of **ES 572, ES 575** Exactly like **ES 570**, with the addition of a "freeze" button.

80 SERIES One Inch Displays Viewable at 35'

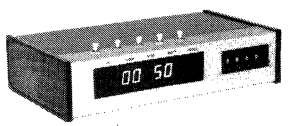


ES 182F Six-Digit, 12 Hour Clock, **ES 184F** Six-Digit, 24 Hour Clock, **ES 380F** Four-Digit, One Hundred Minute Up/Down Timer, **ES 381F** Up/Down Timer, **ES 580F** Four-Digit, Sixty Minute Timer.

90 SERIES Two Inch Displays Viewable at 60'

ES 391AE Presettable Up/Down Timer **ES 590AE** Sixty Minute Timer, Six-Digit Clocks: **ES 992AE** (12 Hr.) and **ES 994AE** (24 Hr.)

100 Minute Up/Down Timers



ES 301AE is a four digit, one-hundred minute timer. With **ES 302AE,** the user can preset times much faster than with the **ES 301AE**, because leverwheel type switches are used for the preset features.

ES 112E (12 hr.) and **ES 124E** (24 hr.) are solid state, CMOS, six-digit clocks.

790 SERIES Microprocessor Based Programmable Timer

The **ES 790** is a 1,000 event, 32 channel, microprocessor-based programmable clock.

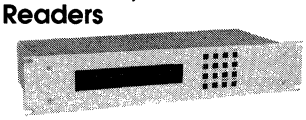
780 SERIES RAM Time Programmers

When programming more than ten events, the **780 Series RAM Time Programmers** are the most cost-effective way of dealing with the problem. They provide 32 events (expandable to 96) in 5 1/4 inches of rack space.

750E SERIES Thumbwheel Programmer/Comparators

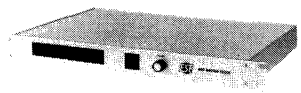
When programming up to four time events, the **750E Series** or expanded versions is recommended. Thumbwheel switches are set to compare the time information from an ESE Clock or Timer.

720 SERIES Programmable Clocks, Timers and Time Code Readers



The **720 SERIES** has been designed to provide microprocessor-based programmability in an economic manner. 10 events occur on 10 isolated output channels, in the form of momentary reed relay contact closures.

MASTER CLOCKS



ES 160 has its own internal timebase, with three second per month accuracy. **ES 160/1** One second per month version of **ES 160. ES 199** has a crystal time base accuracy better than .5 seconds per month. It contains a 10MHz receiver, with audio output, to synchronize with WWV at the push of a button. **ES 180** NIST Master Clock receives and decodes the radio time transmitted by the U.S. NIST. The unit provides an extremely accurate time reference that is available to the user in several forms.

ECONOMY MASTERS

ES 192A (12 Hr.) and **ES 194A** (24 Hr.)
Each Master Clock can drive more than 100 Slave Clocks, including **ES 161E, 161A, 166F, 171, 991AE, 993 AE** and **2559A.**

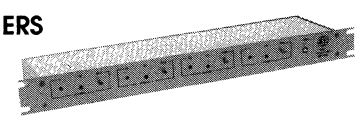
ES 2559 SERIES Master Clock Time For Video

The **ES 2559** is a modified **ES 206A** which receives the serial BCD time code from any ESE Master Clock and displays the time in video.

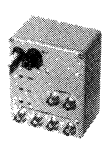
ES 165 Impulse Driver

The **ES 165** Impulse Clock Driver was designed to provide synchronized power to the **ES 168** Analog Impulse Clocks.
ES 168 Analog Impulse Clock operates from the 8 pps output of the **ES 165** Impulse Driver.
When a stepping second hand is desired, specify the **ES 162S** Analog Impulse Clock. **ES 162** Impulse Driver plugs into the **ES 160** chassis, can drive 80 **ES 162S** Analog Impulse Clocks.

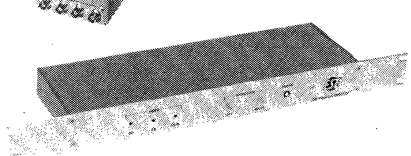
DISTRIBUTION AMPLIFIERS ES 247 Quad 1 x 6 Video Distribution Amplifier



ES207 1 X 4 Video Distribution Amplifier



ES 209 Video/Stereo Distribution Amplifier



The **ES 209** is a 1 x 12 video distribution amplifier combined with a dual 1 x 12 audio distribution amplifier.

ES 217 1 x 4 Audio Distribution Amplifier

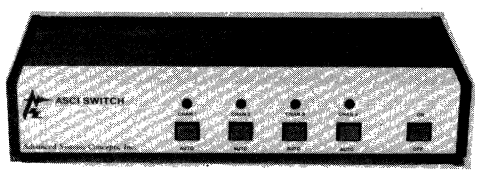
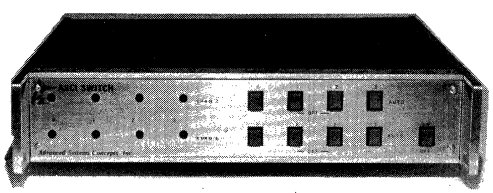
Two Port Switches

ASCI has peripheral switches that allow any two peripherals to communicate with the same input device. Our 20 models are differentiated by the type of transmission desired (serial or parallel), number of lines switched per connector, and the method of control (manual, in-line data, master port, back-up through handshaking or data and remote control).



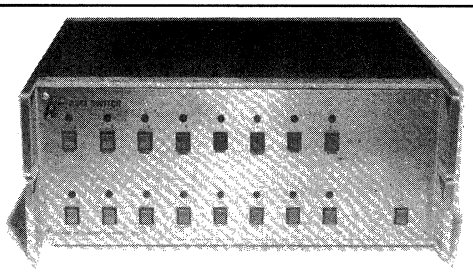
Four Port Switches

ASCI offers a complete line of four port switches for all kinds of peripherals. Current models include four output port expanders and four input sharers for serial or parallel transmission. We have models for intelligent handshaking, software controllable selection, and manual switching of devices.



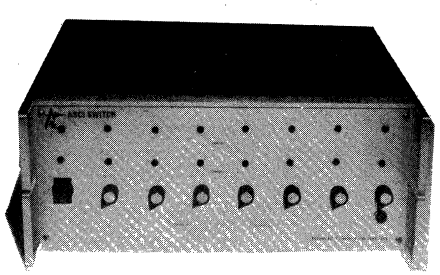
Multiport Switches

ASCI's multiport switches allow anywhere from one to 32 inputs to communicate with one to 32 outputs. Devices supported range from printers and plotters up to mag tape drives. Control can either be using the in-line data stream, manual operation, remote control signals, handshaking or through a master port. Over 32 models are available.



Rack Mounted Switches

Any of our two or four port switches can be placed in rack mountable enclosures. Our standard racks can hold 4 of the four port modules or 8 of our two port modules. In addition, configurations are available that allow bank control of all modules in the same enclosure simultaneously.



Custom Configurations

In addition to our standard line ASCI also designs custom units. These units can consist of simply one of our standard products with special connectors or cabling or a complete configuration with special protocol and handshaking requirements. Since our specialty is peripheral interfacing we're sure to be able to provide the unit that will satisfy your needs.

ASCI can also satisfy your data transmission needs. Call us for information on cabling, line drivers and protocol converters.

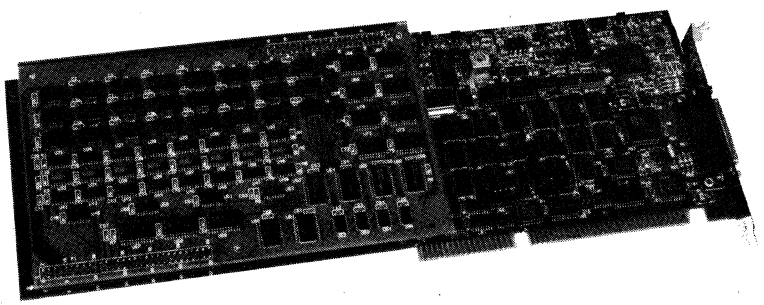
FG/ALU-8 Video Frame Grabber with Arithmetic Logic Unit for the PC/AT



Functional Description

The FG/ALU-8 is a PC/AT-compatible plug-in board that provides the high performance image acquisition and processing capability that is normally possible only with costly multi-board or system solutions. The FG/ALU-8 provides 512 x 512 x 8-bit resolution, on-board 8-bit real-time ALU processor, on-board storage of 2 to 32 image frames, and triple display DAC outputs on a single board — at a cost that makes it the ideal choice for use in applications such as machine vision, automated inspection, and biomedical analysis. Analogic's IMAGINE™ software provides user-friendly menu driven access to all functions of the FG/ALU-8.

The FG/ALU accepts RS-170 (512 x 480 x 8 bits) or CCIR (512 x 512 x 8 bits) video standards, and flexible PLL circuitry provides stable VCR locking. Once acquired, the images are stored to the on-board frame buffers, and may be locally processed in frame time with the ALU. Input LUTs allow pre-processing of images, such as inversion or contrast, while output display LUTs provide pseudo coloring from a palette of 16.7 million colors, multi-image transformations, and non-destructive overlays.

The optionally available IMAGINE™ software provides the user with an easy to use method of controlling and operating all functions of the FG/ALU hardware. Pull down menus provide control of all hardware functions, image acquisition and management, ALU operations, and all library functions. A library of "C" callable functions (V-LIB-8) is also available for custom software development.

MINIGLOSSARY TIMERS

Accuracy
The variation of unit performance, i.e., time delay, voltage trip point, etc., over the specified conditions of ambient temperature, input voltage range, and time between operations.

Adjustability
The changing of a unit set point, within the specified range of unit operation, by means of internal or external adjustment mechanism (i.e., changing time delay with potentiometer).

Contact Rating
The electrical power-handling capability of relay contacts under specified environmental conditions and for a prescribed number of operations.

Delayed Interval Timing Function
Input voltage is applied continuously. The timing cycle is started by momentarily actuating the control circuit. The functions of separate Delay-On-Operate and interval type timers are combined in one package providing a single OFF-ON-OFF output cycles

Also called: single shot.

Delay-On-Operate Timing Function
Application of the input voltage starts the time delay. At completion of the time delay, the relay contacts transfer.

Also called: Delay-On-Make, On-Delay, Delay Relay, Delay-On-Pickup.

Delay-On-Release Timing Function
Input voltage must be supplied continuously to timer. Actuation of control circuit causes relay contacts to transfer immediately. Time delay starts when control circuit is released. The relay remains energized for the duration of the time delay—then de-energizes.

Also called: Delay-On-Break, Off-Delay, Delay-On-Dropout, Delay-On-Energization.

Frequency Sensor
A device that monitors a predetermined overfrequency and/or underfrequecy condition, and changes output state when these conditions exist.

Hysteresis
The difference between the response of a unit or system to an increasing and a decreasing signal (example: a voltage sensor).

Interval Timer Timing Function
Application of input voltage causes relay contacts to transfer and time delay to begin. At completion of the time delay, the relay contacts return to de-energized state.

Also called: Delay Interval, One Shot.

Output Control
The switching device, either solid-state or electromechanical, used in the unit to control the load connected to the output terminal(s).

Phase Sensor
A device that monitors for proper phase rotation in 3-phase systems.

Programmability
Ability to modify function, time delay or input voltage of a timer.

Recovery Timer

(Delay-On-Operate/Interval Timer)
The minimum time that input voltage must be interrupted *prior* to time-out to insure a successive timing cycle within the specified limits.

(Delay-On-Release)
The minimum duration of time that control circuit must be re-actuated to insure a new timing cycle when the control circuit is released.

Recycle Time

(Delay-On-Operate or Interval Timer)
The minimum time that input voltage must be interrupted after the timing cycle is completed to assure a successive timing cycle within the repeatability specified.

(Delay-On-Release)
The minimum duration of time that control circuit must be actuated to insure a successive timing cycle within the repeatability specified when the control circuit is released.

Repeat Cycle Timer Timing Function
Application of power automatically initiates continuous off-on cycling of the output relay.
Also called: flasher, intervalometer

Reset Time
The time required for the contacts to return to normal position when power is removed.

Reverse Polarity Protection
Blocking circuitry arrangement within the timer to prevent damage or output actuation if reverse polarity input voltage is applied.

Tolerance
The difference between specified and actual timing or sense point (factory setup tolerance).

Transient Protection
Prevents damage to unit if positive or negative transients are applied to the unit. Insures proper operation of the unit during and after transient occurrence. Max. transients are usually specified as to amplitude and duration, i.e., 1000V for 1 second.

Trip Point
The predetermined point at which a sensing device is set to change the output state.

Voltage Sensor
A device that monitors for a predetermined overvoltage and/or undervoltage condition, and changes output state when these conditions exist.

FEATURES

- Low power consumption
- True Type II tracking converter
- Industry standard pin-out
- 1000% overvoltage protection
- Insensitive to amplitude and frequency variations

APPLICATIONS

- Radar tracking systems
- Navigation systems
- Industrial control systems
- Collision avoidance systems

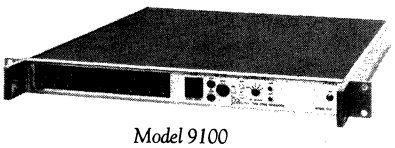
DATUM TIMING

Time Code Generators

Designed for applications requiring low cost, simplicity and high reliability, Datum's time code generators develop time code signals suitable for magnetic tape recording and distribution to remote locations. These units are available in many configurations, and a wide variety of optional features permits the equipment to be tailored to virtually any application.

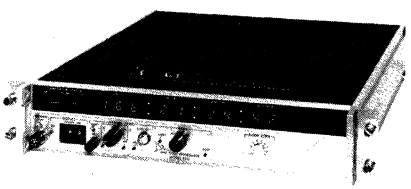
Model 9100/9110 Time Code Generators

The Model 9100 generates a modulated IRIG B time code signal and multiple pulse rate outputs. Front panel controls enable the instrument to be preset, started and halted. Each time digit can be preset individually to facilitate time-of-year or elapsed time operation. A front panel LED display provides a continuous indication of the encoded time value. The generator is contained in a 1-3/4" high chassis designed for mounting in a standard 19" equipment rack.



Model 9100

The Model 9110 includes all the features of the Model 9100, with increased chassis space and added internal power capacity. This unit also generates both modulated and DC-level-shift versions of the IRIG B time code, and a 30-line parallel BCD output reflecting encoded time. Available in 3-1/2" and 5-1/4" high chassis configurations, the Model 9110 accommodates a greater number of optional features than the Model 9100.



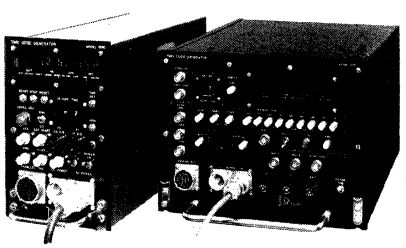
Model 9110

Model 9150 Time Code Generators

This family of time code generators is designed for airborne, shipboard and portable applications, where reliable operation in rugged environmental conditions is essential. Available in many configurations, these units offer the systems engineer a wide choice of optional features, functional capabilities and physical sizes in order to meet the requirements of virtually any mobile application. A few of these configurations are described below.

Model 9150-100 Time Code Generators

This instrument offers the greatest potential for multiple capabilities of any of the 9150 family. The unit is contained in a 1/2- or full-ATR chassis (depending on internal space requirements) conforming to Military Standard MS91403 (ATR type) requirements. Basic circuitry and optional features are mounted on individual circuit cards to facilitate both maintenance and future expansion.



Model 9150-100

The basic unit is driven by a temperature compensated, crystal controlled oscillator and produces 1-, 10- and 1k-pps pulse rate outputs. A nine-digit LED time display is located on the front panel. Input power requirement is +28 Vdc. All electronic components are mounted on plug-in PC boards to facilitate maintenance and future expansion.

Model 9150-406 Time Code Generators

This unit is smaller than the Model 9150-100, but still offers a comprehensive list of capabilities. Basic outputs include modulated IRIG B time code, 1-, 1k- and 1M-pps pulse rates, and 30-bit parallel BCD time data.

Model 9150-406

The generator can be automatically synchronized to an incoming IRIG B signal or manually reset for elapsed time applications. Several functions can also be remotely controlled via dedicated input lines. Input power requirement is +28 Vdc. A rechargeable battery supply is also included. The unit measures 4" high, 5" wide and 8" deep.

Model 9150-300 Time Code Generators

Measuring just 2" high, 5" wide and 4" deep, this light weight, microprocessor controlled instrument is designed for installation in confined spaces. The unit generates a modulated IRIG B time code output and features a nine-digit LED time display. CMOS microcircuits minimize space and power requirements.

Model 9150-300

The unit operates on +12 Vdc power, and is equipped with a Nicad battery supply for continued operation in the event of a power failure.

Model 9150-3000 Time Code Generators

Its miniature size (2-3/4" high, 3" wide, 5-3/4" deep) makes this instrument an ideal candidate for applications involving airframes, remotely piloted vehicles, etc. The unit generates modulated IRIG B time code, and operates on either +12- or +28-Vdc power. An internal battery supply is included.

Time Code Translators, Readers, Displays

Model 9200/9210 Time Code Translators

This unit is ideally suited to applications requiring precise time code translation, coupled with low cost, high reliability and space for a limited number of optional features. Configured to read the standard IRIG B code format, the basic Model 9200 includes a front panel display and TTL-compatible, multiple-rate pulse train outputs. Wide band input, automatic forward/reverse code translation and digital error filtering make the unit particularly useful for high-speed tape search operations. Measuring just 1-3/4" high, the chassis is designed for mounting in a standard 19" equipment rack.

Model 9200

The Model 9210 includes all the features of the Model 9200, with increased chassis space and added internal power capacity. In its basic configuration, this unit translates multiple IRIG time code formats, and produces multiple-rate pulse trains and a 42-line parallel BCD output reflecting encoded time. Available in 3-1/2" and 5-1/4" high chassis configurations, the Model 9210 accommodates a greater number of optional features than the Model 9200.

Model 9210

Model 9500 Remote Displays

A Model 9500 Remote Display can be used with any Datum Timing instrument, or similar source of parallel BCD input data, to display time and/or event information. Units are available in configurations ranging from six digits (seconds, minutes and hours) to 13 digits (time and event data). LED display elements are employed in sizes ranging from 0.4" to 2.0" and larger. Multiple units can be daisy chained via rear panel connectors. The Model 9500 measures 1-3/4" or 3-1/2" high and is designed for mounting in a standard 19" equipment rack.

Model 9500

Model 9520 Time Display

The Model 9520 reads an IRIG A, B or E modulated time code signal (as optionally defined) in order to display time information in installations involving long distances and/or multiple sites. A modulated code signal transmitted over a single transmission line is much more satisfactory for a widely distributed network.

A 30-bit parallel BCD time output is provided via a rear panel connector. LED display elements are employed in sizes ranging from 0.4" to 2.0" and larger. The unit measures 1-3/4" or 3-1/2" high and is designed for mounting in a standard 19-inch equipment rack.

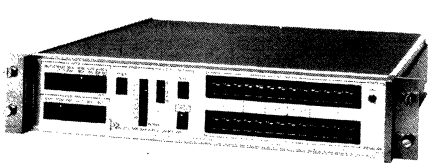
Model 9520

Tape Search and Control Units

Model 9241 Tape Search and Control Units

This unit provides all control functions required by an instrumentation tape transport to locate a segment of tape defined by preselected start and stop times. By comparing its start/stop time switch settings with translated time code from the data tape, the 9241 exercises precise control over the transport to conduct an automatic forward/reverse search operation.

Microprocessor control and modular construction provide high reliability, enhanced field maintenance capability, and future expandability. The unit measures 3-1/2" high, 17" wide and 18" deep, and is designed for mounting in a standard 19-inch equipment rack.



Model 9241

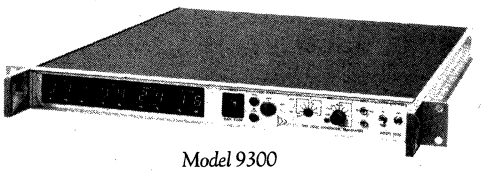
Remote operation via RS-232, IEEE 488 or General Purpose Input/Output interfaces are optionally available.

DATUM TIMING

Multifunction Instruments

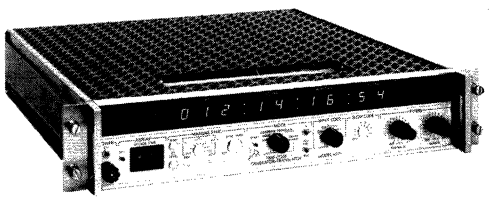
Model 9300/9310 Time Code Generator/ Translators

The Model 9300 combines the primary functions of the 9100 and 9200 to provide generation and translation of the IRIG B time code. Multi-rate pulse trains (1k, 100 10 and 1 pps) are also generated by the basic unit. Designed for mounting in a standard 19" equipment rack, the unit measures just 1-3/4" high. A nine-digit LED display reflects translated or generated time, depending on the selected mode of operation. Each digit can be preset by the operator. All controls and indicators are located on the front panel.



Model 9300

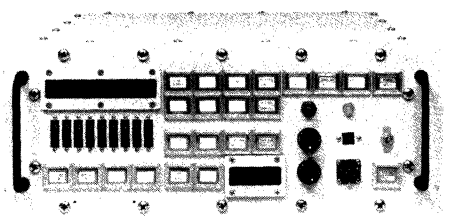
The Model 9310 includes all the features of the 9300, with increased chassis space and added power capacity. In its basic configuration, this unit translates multiple IRIG time code formats, and produces multiple-rate pulse trains and a 42-line parallel BCD output reflecting encoded time. Available in 3-1/2" and 5-1/4" high chassis configurations, the Model 9310 accommodates a greater number of optional features than the Model 9300.



Model 9310

Model 9340 Service Qualified Timing Subsystem

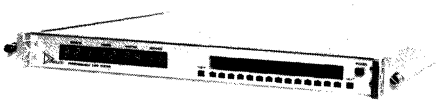
The only equipment of its type to meet MIL-E-16400 requirements, the Model 9340 Timing Subsystem (TD-1307/U) is service qualified for shipboard operation. The unit generates and translates IRIG B time code and conducts automatic tape search operations. Internal circuitry is mounted on a series of plug-in modules. Each module also includes self-test circuitry to check for proper operation and display test status information. The Model 9340 is designed for mounting in a standard 19" equipment rack and measures 7" high.



Model 9340

Model 9700/9710 Programmable Time Systems

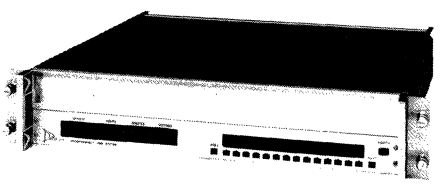
The Model 9700 is available as either a time code generator or generator/translator, suitable for data correlation, magnetic tape recording, etc. Tape search capability can also be included. Microprocessor based design and modular construction provide high reliability, user friendly operation, expandability and compact size. All setup data and status indications are shown on an alphanumeric display, which also prompts the operator through the various programming procedures required for setup and operation. Diagnostic self tests are automatically performed each time power is applied. Time is continuously visible via the LED display.



Model 9700

The Model 9710 includes all the features of the Model 9700, with increased chassis space and added internal power capacity.

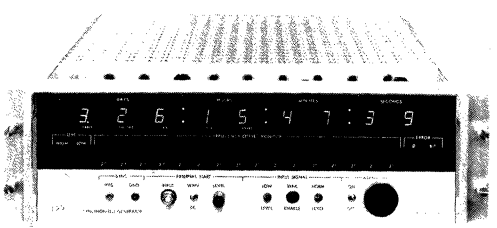
The basic generator function produces IRIG B code. Seven variations of the IRIG code can be processed by the translator. Both units are designed for mounting in a standard 19" equipment rack. The 9700 measures 1-3/4" high and the 9710 is 3.5" high.



Model 9710

Synchronized Time Code Generators

Synchronized Time Code Generators are designed to generate IRIG time code either in the normal fashion or in synchronism with an incoming IRIG time code signal. In the synchronized generator mode, the internal clocking oscillator is servo controlled to maintain phase coherency with the input time code. This produces IRIG time codes and multiple pulse rate outputs in synchronism with the input code. Generation will continue even if the input code is interrupted.



Model 9390 Sync Generator

Units are available either as dedicated instruments (the Model 9390 Synchronized Time Code Generator), or as derivatives of other equipment such as the Model 9100, 9300 or 9700. Designed for mounting in a standard 19" equipment rack, chassis range in height from 1-3/4" to 5-1/4".

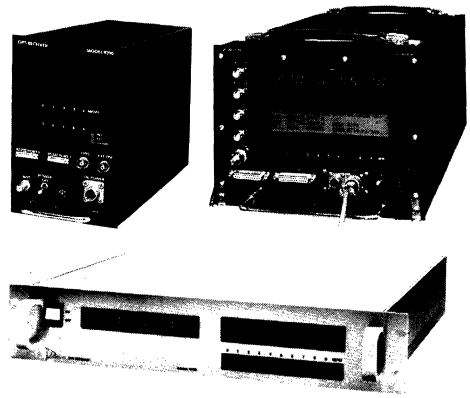
Model 9390 GPS Time/Frequency System

By monitoring code transmissions from Navstar satellites in the GPS constellation, Datum's 9390 family of GPS receivers offers convenient, on-site access to time and frequency data of unparalleled precision, anywhere on earth. These instruments have enjoyed wide acceptance in the time and frequency community and have opened a host of new possibilities to instrumentation professionals.

Dual channel design enables the 9390 to function as a time and frequency measurement device equally well in dynamic (vehicle speeds up to 600 knots) and fixed-platform installations. Retention of time and almanac data enables the unit to perform visible satellite acquisition in less than two minutes. Geographical position in latitude, longitude and altitude (WGS 84) is determined automatically via an internal position locator algorithm.

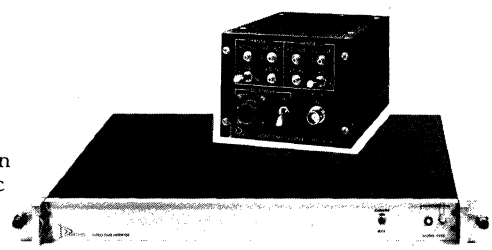
Two types of packaging are available – a 19" rack mounting or tabletop unit, and ruggedized versions for portable or mobil applications. In either case, the receivers are completely self contained except for their antenna/preamp assemblies. The antenna/preamp assemblies are very compact (1.5" high, 4.75" wide, and 4.0" deep, including base) and weather proof, and can be installed in any location providing line-of-sight reception.



Model 9390 GPS Receivers

Video Time/Data Inserters

Video Time Inserters insert translated IRIG B time information into a composite video signal, thereby enabling time to be displayed on a video monitor or television screen. With a time tag in every frame, the video data can also be correlated with various system elements, such as strip chart recorders, printers, magnetic tape units and computers. Units are available in a variety of configurations, ranging from plug-in PC boards to miniaturized airborne units. Optionally, a line of up to 16 alphanumeric characters can be inserted immediately below the time word.



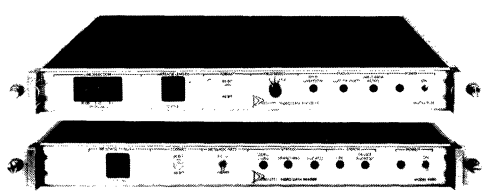
Video Time/Data Inserters

Video Data Encoders and Readers

These units permit digital information to be transmitted within a composite video signal in a manner that is completely transparent to the viewer. The basic characteristics of the video signal remain unaffected.

The Video Data Encoder converts parallel input data into a Datum serial NRZ format. The data, representing up to eight consecutive lines of information, is inserted into the vertical blanking interval of the composite video signal for transmission to a video recorder or remote receiver. The Video Data Reader extracts the encoded information from a received video signal and converts it to an eight-bit parallel format meeting the requirements of most computer interface specifications.

Both the Encoder and Reader are contained in a 1-3/4 inch high chassis designed for mounting in a standard 19" equipment rack.



Video Encoders/Readers

Model 9610 Timing Terminal Unit System

The Model 9610 Timing Terminal Unit System comprises a highly versatile group of components (housing, power supply and functional modules) that can be configured to meet a wide variety of signal conditioning and distribution requirements. Each housing may contain a power supply and slots for up to 12 functional modules.

Typical applications include signal conditioning and distribution in central timing systems, repeater amplifier distribution at remote locations, or special processing for terminal equipment.

Compact size, convenient access to components, rack mounting or portable housing chassis, and a large selection of functional modules make the 9610 an attractive solution for the systems designer. Functional modules include line drivers, demodulators, amplifiers, pulse generators, oscillators, decoders and many others.

THE 16M1 ADC HE

GENERAL DESCRIPTION

This design by Hopper Electronics provides a high speed, high accuracy, high stability plug-in module, consisting of three P.C. boards plugged together to provide a complete ADC function, including the integral sample and hold circuitry.

The design employs a three step fold-back conversion technique with a transparent partical pipe line to achieve this advance performance.

The high input impedance circuitry consists of two independent complete sample and hold circuits, with a "ping-pong" switch and buffer amplifier.

Temperature compensating circuits and bulk metal film, low temperature coefficient precision resistors provide the high stability.

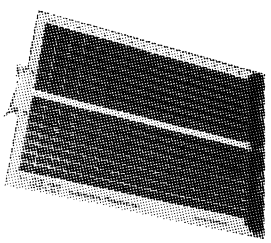
9000 SERIES

MATRIX SWITCHING SYSTEMS

ITI's 9000 Series matrix system incorporates the HIGHEST CROSSPOINT DENSITY of all ITI's matrix switching systems. It was specifically designed to meet the growing demand for large scale (up to 3000 inputs x 3000 outputs) but affordable matrix switching.



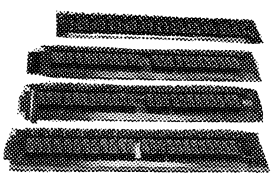
Has features of 8500 series and:

- Sizes up to 3000 inputs x 3000 outputs
- Choice of 16 x 16 or 20 x 20 relays per circuit card
- Models from DC to 1 MHz
- Transmission Characteristics
  - Isolation > 95 dB at 1 kHz
  - Insertion Loss < .1 dB at 100 kHz

HIGH FREQUENCY

MATRIX SWITCHING SYSTEMS

The New ITI High Frequency switching system was developed to handle wide bandwidth switching of general purpose analog and digital voltage signals from DC to 100 MHz. The system is suitable for VHF-UHF Band, wideband IF, antenna and airborne switching.
The switching function can be divided into multiple sections under common control; i.e., one section can provide high frequency switching, and the second section can provide audio switching.



- Frequency Range: DC - 100 MHz
- Crosstalk Isolation: >55 dB at 100 MHz
- Insertion Loss: <1.0 dB at 100 MHz
- Impedance: 75 ohms

Random access: Channels selected by manual front panel switch, remotely by parallel BCD, IEEE-488 or RS-232C.

GENERAL: Scan voltages from microvolts to 300 volts. Microprocessor based interface provides two-way communications with a computer via IEEE-488, RS-232C or parallel BCD.

COMPUTER INTERFACE: parallel BCD std., optional IEEE-488 or RS-232C

CAPACITY: 10 to 999 channels - master 10 to 100 channels, slave units add 10 to 200 channels each. Master and slave require 3½″ std. rack space.

NUMBER of POLES: 3 to 100 per channel.

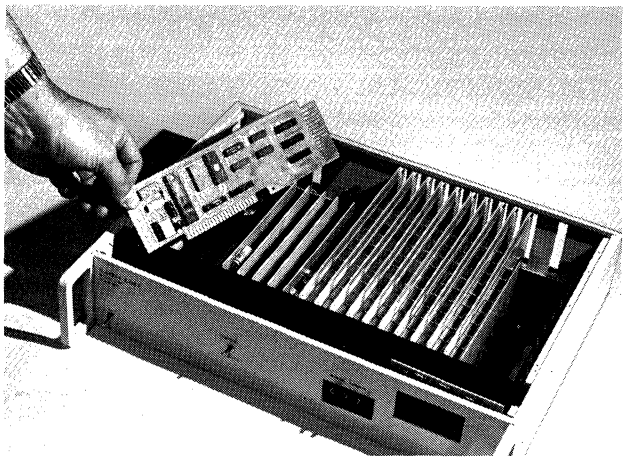
SWITCHING RATE: to 200 channels per second

CONTACT RATINGS: Microvolts to 300 volts

DISPLAY: 7 segment LED - 3 digits for channel, 4½ digits for data

DIMENSIONS: 3½″ high × 17″ wide × 10″ deep

USES: Reading tranducers, thermocouples, RTD's, switch positions, BCD and binary data lines

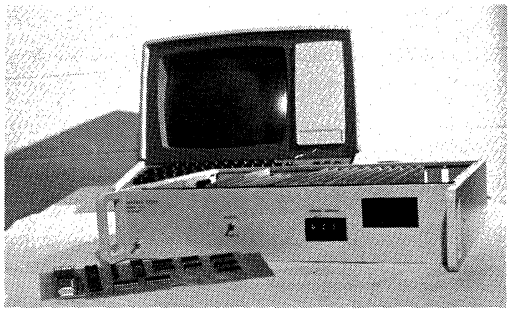


Shown with the Model 1701 Scanner is the Computer Interface Board.

OPERATION FROM A COMPUTER: Commands such as SELECT CHANNEL and SEND DATA are accomplished by two-way communications between a terminal or controller and the Model 1701 using ASCII. Send "25C" to select channel 25. Send "I" to have the scanner respond with 4½ digits of data, sign and decimal point.

LITERATURE: Write for Bulletin 1701-MIB

COMPUTER CONTROLLED DATA ACQUISITION SYSTEM



When connected to the Matrix Model 1701 analog scanner, a personal computer becomes a DAS which can read 100 analog inputs such as thermocouples, RTD's, strain gauge transducers, or any other device with output levels from microvolts to hundreds of volts. Connection is made via the RS-232 or parallel BCD.

Simple commands are accomplished by two-way communication between a computer and the Model 1701.

A 100 channel scanning system, complete with computer, A/D converter, color video monitor and software control module costs less than $42 per channel.

ACCESSORIES: Typical temperature sensors are priced at $15 each. Pressure transducers (ranges up to 750 psi) are priced at $35 each.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

Everything you want in a GPS station clock, in one neat box:

- **GPS receiver**
- **Disciplined standard**
- **Multiple output timing signal generator, and much, much more.**

What do you expect from a company with more than 30 years of production and field experience in the timing business? You'd expect a one-unit master timing station, capable of tracking six satellites simultaneously — even while moving at 1,000 miles per hour — all inside a 3½ inch rack-mount chassis.

That's the **Model 8810 —** a mature product, value-engineered and time-tested, just like the ones we've been providing to NASA and DoD for decades. And there's so much built into this unit, it's hard to describe. Just review the features listed below:

ENVIRONMENTAL TEST CHAMBERS

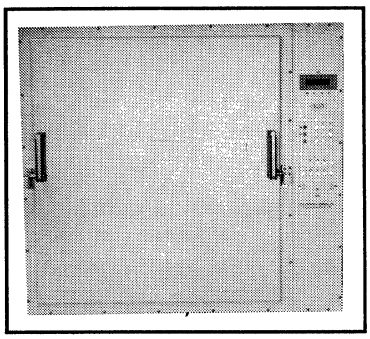
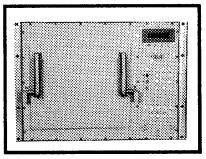
SUN SYSTEMS

Chamber Specifications

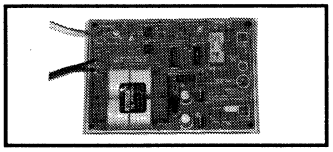
The chambers are constructed of 302 Stainless Steel with sealed interior. Chamber Volumes from .37 ft^3 to 6.16 ft^3. Temperature Ranges from -184°C to 315°C. Heat/Cool Rate of Change up to 1°C/sec Prices from $3150. Local Programming, RS232 and IEEE-488.





Over/Under Temperature Protection Module

This electronic control device monitors the upper and lower temperature. When the temperature exceeds the upper or falls below the lower temperature limit set point, the overtemperature protection module will interrupt power and disable the cooling and heating processes. This device can be redundant to the primary controllers standard safety features.



LN_2 Line Purge

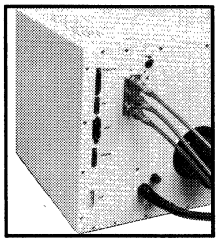
This option lets Liquid Nitrogen flow through the line automatically thus cooling down the line quickly and decreasing testing time. This option is provided for use with long LN_2 lines.

N_2 Gas Purge

N_2 gas enters the chamber forcing the air out and provides a Nitrogen atmosphere.

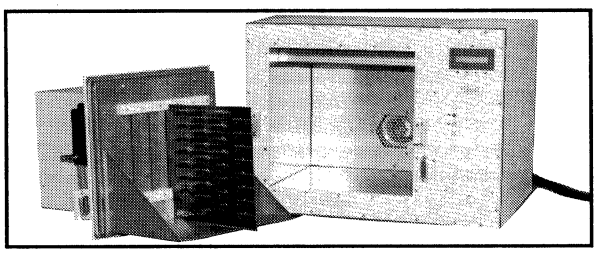
3-Tank Auto Switch Manifold

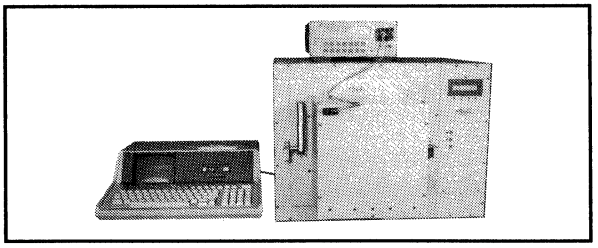
Sun Systems offers a 3-tank manifold with auto-switching for extended testing with LCO_2 @ 850 psi.



Switching Matrix

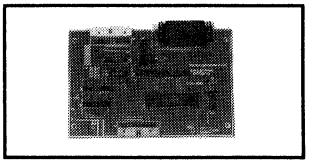
A Kelvin measurement path is provided for up to 160 2 leaded devices or 80 3,4 lead devices. Control of the chamber and selection of a device for measurement are locally controllable via the front panel or remotely controllable via the chamber's RS232/422 or IEEE-488 busses.





Printer Port

An optional IBM/PC Parallel Printer Port is offered to provide automatic data logging and charting of chamber parameters. This board also provides additional Bit I/O to control on/off processes. It consists of eight 100mA open collector drivers capable of driving solid state relays and eight contact inputs with internal pull up resistors to 5 Volts. The I/O on the printer expansion board is accessible from the front panel and via RS232 and IEEE-488.



Remote Control Programs

The demo disk provides a user-friendly menu driven program capable of full chamber control along with example programs for RS-232/422 and GPIB. Sun Systems demo disk is provided free of charge.

Air-Cooled Option

An air-cooling option is available on the larger chambers for pull down from hi-temp to ambient temperature to conserve on expectorant use.

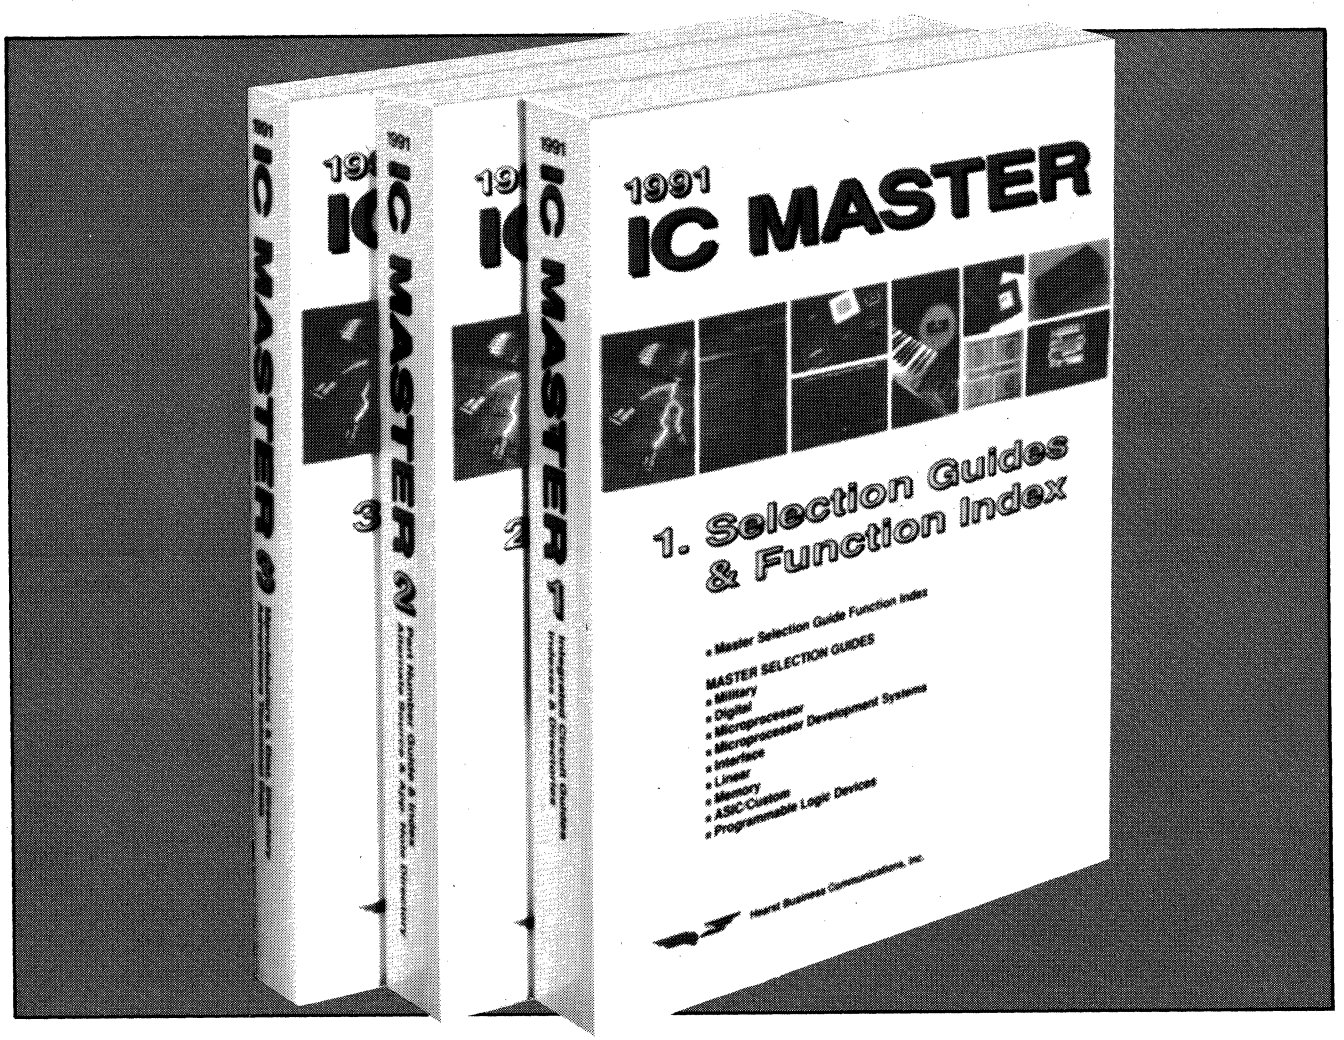
SUPER TIME SAVER!



Do you work with ICs? Do you have trouble finding the IC you need? Are you sick and tired of sifting through dozens of manufacturers' data books? Do you have trouble comparing one set of specs to another? Are you sick and tired of wasting time?

Do we have good news for you! Get your hands on the latest annual copy of the IC Master. The Master will save you both time and money. Here's how.

The Master lists every single IC you can buy. Better yet, the Master lists ICs by function. You know what you want to do. The Master tells you who makes what for what you want to do.

There's more! The Master lists every known alternate source to every integrated circuit. If somebody makes a substitute for an IC, the Master tells you. And fast!

Want to find a custom or semicustom IC? The Master tells you who the manufacturers are, what their capabilities are, and what design tools you need.

Looking for a distributor or a local sales office? The Master tells you where they are. Got a technical problem? The Master tells you who to call. Can't figure out a part number? The Master tells you how the part number systems work.

There's more! The Master has a section on microprocessor development tools with complete performance parameters. There's another section on programmable logic devices giving you everything from output configuration to PLD development systems.

Want to know if there's an application note available on a given part? The Master tells you!

If your question has anything to do with integrated circuits, you need the IC Master. Subscribe now by calling (516) 227-1314. Ask for Marie Botta. Tell Marie you need the Master now.

If you prefer, write to Marie, Hearst Business Communications, 645 Stewart Ave., Garden City, NY 11530. She'll mail you the IC Master subscription form right away.

And, if you tell her you saw it in the 1991/92 EEM, she'll take $10 off the subscription price!

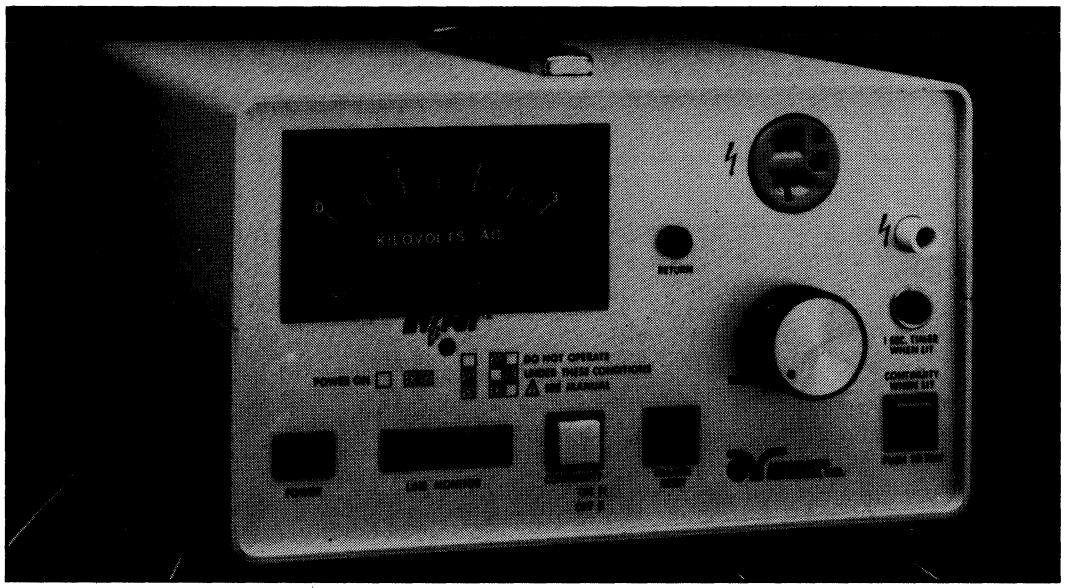
Associated Research's Broad Line of Hypot® Test Equipment



Assures that we have the dielectric withstand tester you need to meet your specific application.

A hipot (high potential) test checks for current leakage or electrical breakdown that can cause electric shock. Underwriter's Laboratory requires specific hipot test procedures for different product groups. Associated Research's full line of Hypot® testers meet UL and other agency requirements.

All Hypots from Associated Research feature:

- Operator Safety. Every Hypot has several built-in safety features, such as safety line monitor and test cables rated at 30KV, to protect your employees from electrical shock during hipot testing. Also available is our optional Safe-T-Probe™ Model No. SP02.
- Easy to set-up and operate. Heavy-duty color coded switches for readability and durability.
- Clear indication of product failure. Your personnel will know when a product has failed to pass the required hipot test.
- Easy to read meters accurately monitor high voltage output during hipot testing.

Depending upon the product you manufacture, you may require one or more of the following features in your hipot tester. Check the table below to select the Hypot model that meets your needs.

- Visual Failure Indicator: Warning light that comes on whenever a product fails the hipot test.
- Audible Failure Indicator: Loud, distinctive alarm that automatically sounds when a product fails the hipot test.
- Manual Reset: When the visual and audible warnings are triggered, the Hypot must be manually reset to continue product testing.
- Built-in Current Meter: Measures the current leakage during testing.
- One Second Timer: Built-in timer circuit automatically maintains high voltage output for one second for consistent testing. One second output is required for some UL test procedures.
- 120K Ohm Resistance: Provides minimum sensitivity adjustment as required for some UL test procedures.

Additional test procedures may require a Hypot accessory such as timers to maintain output voltage for 1 to 99 seconds or "ramp and dwell" which gradually raises voltage output to the test level and then maintains this voltage for 1 to 99 seconds.

Auxiliary relay contacts on some Hypots can be used to trigger an automatic reject mechanism to remove defective products from the production line.

BNC

Pulse Generators

• High Speed • Digital Delay • Optical Pulse • Fast Rise Time • High Voltage

Universal Pulse and Delay Generator System

BNC's Model 6040 Pulse System consists of a 100 MHz mainframe pulse source and a series of plug-in modules that produces a variety of both electrical and optical pulses at rates to 700 MHz.

The 6040 mainframe alone serves as a general purpose 5 V and ECL pulse source and trigger-synchronized digital delay generator with up to 1 ns-step resolution. The family of plug-in modules adapts the instrument to an unprecedented choice of additional uses. They include 150 ps transition time logic level operation at rates to 500 MHz and other functions where amplitudes to ±20 V or ±300 V with fast rise times and rep rates are needed. By installing optical output modules, the 6040 can be quickly transformed into a light pulse generator of various wavelengths that can also be externally modulated or provide CW outputs.

Through use of a crystal-controlled time base, the 6040 System offers frequency accuracy of .01% and delay syncing performance with jitter as low as 25 ps. Both IEEE-488 GPIB and RS-232 programmability are provided along with internal memory storage of parameter settings. The Model 6040 System sets a new standard of pulse generating capabilities and instrument value. Principal specifications for the 6040 mainframe and plug-in modules follow.

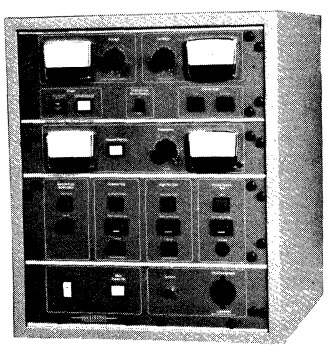
CABLETEST EQUIPMENT

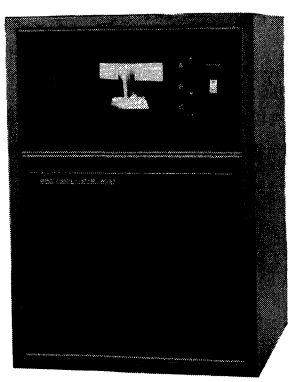
• MULTIWIRE TEST SYSTEM

Rapid and accurate testing of continuity, short circuit, polarity and hi-pot (0-2.5 KVAC) of multiconductor cables. Suitable for telephone, keyboard and all other custom cable assemblies up to 8 conductors. Automatically identifies the location (male plug, female plug, or the cable) and the type of failure. Virtually, any receptacle configuration is available with replaceable "quick change" fixtures. These testers are used by the largest manufacturers of modular jack cordsets.



• HI-POT / GROUND INTEGRITY TESTER

The FAST / SAFE / ACCURATE way to verify dielectric strength (Hi-Pot) variable from 0 - 2.5 KVAC (higher voltages on request) and 0 - .25 Ohms ground resistance. This unit can be used as laboratory equipment or interfaced with automatic controls for production line testing. Tester features automatic capacitance neutralization to ignore the capacitive leakage due to filters, etc., while measuring true resistive leakage levels. Tester features rapid shut-down of high voltage for safety. It also features switch / fuse verification.

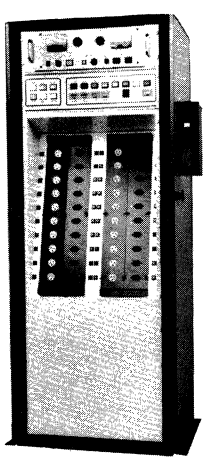


• WIRE VISION SYSTEMS

True color recognition systems (superior to gray scale interpretation) enable the automatic processing of multiple conductor, polarized cordsets. Typical functions are: specific wire orientation to attach polarized terminals, and polarity verification prior to molding cycle. These systems can be integrated into most color/vision applications.

• MULTIPLUG-20 TEST SYSTEM

Automatically tests continuity, short circuit, polarity and Hi-Pot (0 - 2.5 KVAC). 20 cordsets can be loaded in any order or position and tester automatically locates corresponding ends, performs the tests, and indicates the location of both ends of a faulty cordset. This unit comes complete with data counters and 20 NEMA 5-15 receptacles and 20 CEE-22 business machine plug receptacles. Others available.



• CUSTOM TESTING EQUIPMENT

Cabletest builds custom testing equipment to meet your needs. Just let us know your requirements.

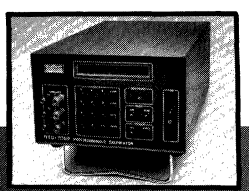
Test and Calibration Instrumentation for Laboratory, OEM and Industry

RTD Simulation Instruments

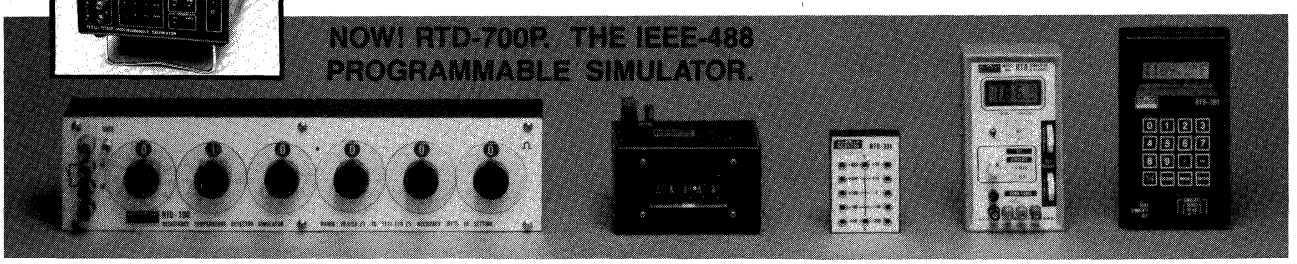
The most extensive, most sophisticated most accurate line of RTD simulators available anywhere.

- ○ Designed for "no adder accuracy."
- ○ Recognized as the industry standard for the test, analysis and calibration of virtually any RTD system or readout.
- ○ Accuracies up to ±0.005% absolute.
- ○ Over 50 models.



Whatever your RTD . . . 10Ω copper to 1000Ω platinum . . . DIN, ANSI or W.H.Y. . . . accuracy anywhere up to ±0.005% absolute . . . resistance value from 10Ω to 10kΩ. *Whatever your application. There is a GR instrument just right for you.*

When accuracy is paramount in RTD simulation, it is critical that you use the tool *specifically designed for the purpose.* [Resistance decades *will* do the job, for example, but at settings below 400Ω "0" resistance and contact resistance often *exceed* the basic accuracy statement of the resistance box.] For top level accuracy it is recommended that you specify GR models RTD-100X, 100, 500/1000 or 200. When the convenience of portability is of primary importance you may prefer to specify models in the RTD-300, 400 or 700 series. When a resistance decade *is* sufficient for the application, specify one of GR's comprehensive range of instruments (see back cover). Note also that GR's E-35 Instant Lab is designed for effective performance as an RTD or Thermocouple simulator.



RTD-100X Table model	Absolute accuracies previously unattainable in RTD simulation with no adders. Standards lab performance, yet ruggedly constructed to perform in the most demanding field applications.	○ Overall accuracy ±0.005% ○ Resolution 0.001Ω ○ Range 10 to 1111.110Ω
RTD-100 Table model		○ Overall accuracy ±0.01% ○ Other specs as above
RTD-500/ 1000 Table model	Similar in performance to RTD-100X and RTD-100 but specifically designed for use with new higher accuracy 1000Ω platinum RTDs.	○ Overall accuracy ±0.005% ○ Resolution 0.01Ω ○ Other specs same as RTD-100
RTD-200 Table model	Based upon same Waidner-Wolf operating principle as Model RTD-100X . . . with savings in original cost.	○ Overall accuracy ±0.02% ○ Resolution 0.01Ω ○ Range 20.00 to 1121.10Ω
RTD-301, 302, 303 Shirt-pocket portable	High accuracy, low cost units designed to test or calibrate on-line RTD systems dedicated to the maintenance of specific temperatures.	○ 10 standard temperatures ○ OR 10 temperatures of customer's choice ○ OR 5 standard, 5 choice
RTD-401, 2 Portable	Use either as simulator or readout for instrumentation, process and quality control applications. Battery-powered.	○ RTD-401 for 100Ω pt RTDs ○ RTD-402 for 10Ω cu RTDs ○ 1mA test current
RTD-700 Portable	High accuracy simulator and readout combination for use with DIN pt 100 RTD systems. Microprocessor control, key-board entry, instant warm up.	○ Accuracy ±0.1% of setting + 1 digit (simulator) ○ Resolution 0.1° (full 4 digit readout)
RTD-700P Table Model	Same specs as RTD-700 above . . . **AND PROGRAMMABLE (IEEE-488).**	

Thermocouple Simulators

Ultra-precise for calibration of virtually *any* T/C system . . . *any* T/C material . . . *any* temperature . . . with standards lab accuracy.

Provide ±¼% accuracy. Can be used to calibrate virtually any T/C system at any temperature with internal cold function compensation referenced to 0°C. Zero output impedance insures that system element under test or calibration responds *only* to the simulated temperature signal. *This eliminates need to disconnect system thermocouple.*

Instant Lab E-35B

The 5-in-1 battery-operated calibrator

- ○ Thermocouple or RTD simulator.
- ○ Decade resistance box.
- ○ Current source or voltage source.
- ○ All at basic ±0.1% accuracy.

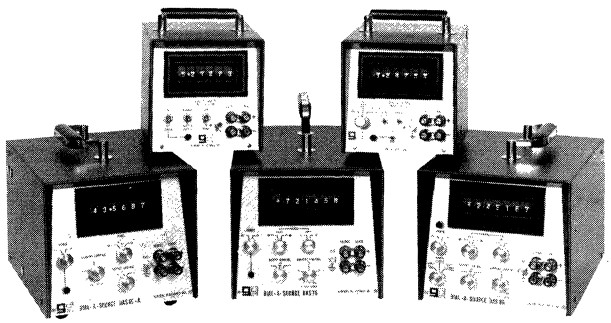
Model E-35B simulates the output of thermocouples B, E, J, K, N, R, S and T, as well as any RTD with resistances from 0 to 2000Ω — 10Ω copper, 120Ω nickel, and 100, 500 and 1000Ω platinum. It also outputs 0-200mVdc, 0-20Vdc and 0-200mAdc.

Basic accuracy for all functions is ±0.1% of setting with readout provided in a simple in-line easy-to-read format.

Dial-A-Source

VOLTAGE/CURRENT SOURCES

- Ultra-precise voltage and current sources.
- Transducer simulation, instrument calibration and component evaluation.
- Calibration of 4-20 and 10-50 mA transmitters.



These easy-to-use dialable reference/calibration sources are available in a complete family of instruments. All models have been specifically engineered for extremely stable, highly accurate performance in standards laboratories. All models have been ruggedly designed for use in the plant. Special battery-operated units are ideal for field usage. And there is a series of remarkably versatile instruments that have been built to offer compact lightweight portable performance at a moderate price.

Whatever your application, there is a GR model engineered to do the job.

Resistance Decades

- Resistance to 111.111 Meg, resolution to 0.01Ω.
- Accuracies from ±1.0% to ±0.01%.
- 3, 4, 5, 6, 7 decade, OEM, console or bench models.

Both the RDS and DA Series are General Resistance quality instruments based upon the GR ultra-precision wirewound resistor that the company has been producing for almost 30 years. Both offer 111.111 megohm resistance values, accuracies to ±0.01% resolutions to 0.01Ω and models of up to 7 decades.

RESIST-O-STAT MODELS (RDS Series)

Two versions — with basic accuracies of either ±0.025% or ±0.01%. Resistors used are low reactance types permitting the RDS to be used from dc through audio frequencies. Zero resistance is 0.0015Ω/decade. Numerical readout is positive and in-line.

DIAL-AN-OHM UNITS (DA Series)

Reliable performance at less than one-half the cost of the RDS models, partly because DA thumbwheel switches are far less expensive than RDS rotary switches.

NOW! A GUARANTEED CALIBRATION/RECERTIFICATION SERVICE ON ALL OF OUR PASSIVE RTD SIMULATORS AND RESISTANCE DECADE BOXES

General Resistance RTD Simulators stand alone as far as accuracy is concerned. Our Decade Boxes are also superior or equal in performance to any in the industry. But... remember ... even the finest and most sophisticated tools require periodic recertification and service.

Who better to check/calibrate and certify them than the General Resistance people. The people who designed and built them. The same General Resistance people who pioneered the concept of "NO ADDER ACCURACY" incorporated in the RTD-100, RTD-100X, RTD-200 and RTD-1000/500.

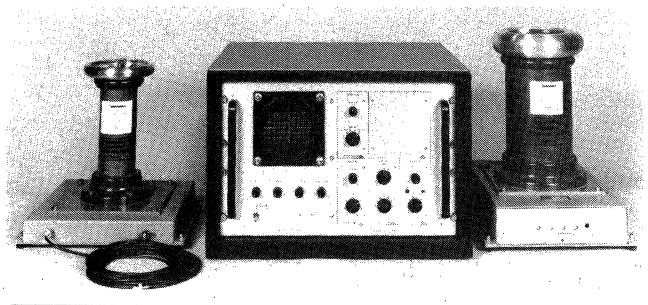
PARTIAL DISCHARGE DETECTION SYSTEMS



The Corona detector measures partial discharge levels within the test specimen and is designed to provide flexible selection of desirable features for various test configurations.

The Model CD077A Detector (middle unit in photo at right) provides instrumentation to measure partial discharge pulses isolated from high voltage by a power separation filter (PSF) (on the right). These, in conjunction with the calibration injection capacitor (CIC) (on the left), and a power source (as in the 700 series above) are basic elements for testing the insulation of electrical apparatus and electronic components.

Hipotronics has long standing experience in the design and manufacture of a *complete line* of integrated units that incorporate a matched HV source (either ac or dc) and the partial discharge detection system. For more information request catalog section 8205.

8060 PL Series — Air Insulated DC Insulation Tester

The cascaded circuitry (patent #3,643,105) of the 8060 PL series eliminates the major disadvantages of the widely used Cockroft Walton multiplier circuit: there is no decrease in power capability as more HV sections are added. Each HV module is a complete voltage doubler with its own epoxy-encapsulated transformer; each transformer has a tertiary winding to feed the succeeding stage. The standard controller has a continuous rating of 1 KW, which can be raised to 2 KW during cable charging for short duration.

Input	115V, 60 Hz or 220V, 50/60 Hz 1. KVA full load		
Output	Model No.	Number of 60 KV Modules	Output

	8300 PL	5	0-300 kV @ 3.3 mA 0-250 kV @ 4.0 mA

8175 PL Series — Gas Insulated Modular Unit

The high voltage circuitry in this unit is a patented cascade system, which overcomes the disadvantages of conventional voltage-multiplier circuits. Each high voltage section is a complete voltage doubler with its own transformer, rectifiers, capacitors, series resistors, meter multiplier, and an insulated tertiary to feed the next stage. The conservatively designed transformers can be overloaded repeatedly. Anticorona toroids are provided as needed.

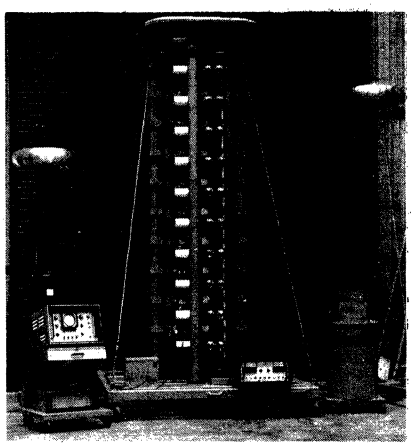
Hipotronics®

HIGH VOLTAGE DIELECTRIC TEST EQUIPMENT

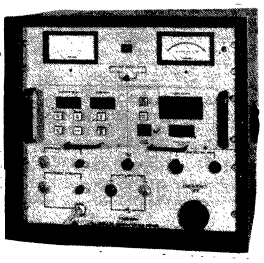
IMPULSE GENERATOR TEST SYSTEMS

Designed for Flexibility, Impluse Systems simulate Lightning or Transient Voltage Phenomena Associated with power transmission.

Standard Systems available in 100 kV and 200 kV stages, and can be purchased to be expandable to cover future Test Requirements.



IMPULSE ACCESSORIES



Waveshaping Resistors, Multiple Element Chopping Gaps, Sphere Gaps, Recurrent Surge Generator, Step Pulse Generator, Voltage Dividers (Damped capacitive and resistive) and Wide Band Current measurement equipment.

DIGITAL IMPULSE MEASUREMENT SYSTEMS

These instruments are specifically designed and packaged for use in high voltage impulse tests. Model DIMS-1 and DIMS-2 are 8-bit, one and two channel respectively. Model DIMS-5 is a 10-bit, dual channel design with an option for 4-channels. Model IG1.5-CAL is a Precision Impulse Calibrator designed to provide calibration pulses for digitizer calibration.

Digital capture of all measurements has many advantages over conventional analog oscilloscopes, cameras and film. Interference so often associated with high electromagnetic fields and high voltage and high current impulse testing is overcome by particular attention to shielding.

All equipment is designed to meet the approved standards ANSI/IEEE std. 1122-1987 and IEC-604 for digital recorders. For more information, ask for catalogs.

† Accuracy = ±(Specified basic accuracy +.08 x Residual Impedance) after subtraction of Residual Impedance.

* Residual impedance is reduced to .04Ω or 5 pF for lowest decade with LR Option. This makes for more effective usage of low impedances. Lowest decade is isolated from the others with a switch when desired.

** Higher power resistance substituters (1 watt or higher) available; see below.

IMF-600A Digital Impedance and Multifunction Meter

COMBINES MOST OF THE COMMONLY NEEDED LABORATORY MEASUREMENTS

AUTOMATIC MEASUREMENT
Measurement for all functions is provided automatically in a 3½ digit display. At 4 measurements per second — no balancing or manual operations are required.

HIGH ACCURACY
The basic impedance accuracy is 0.25%; for multimeter functions, basic accuracy is 0.1%.

DISSIPATION FOR CAPACITORS & 1/Q FOR INDUCTORS
Capacitors and inductors are easy to classify in two dimensions. Dissipation is important in selection of low loss capacitors, especially for low power and critical designs.

WIDE RANGE
The full spectrum capability covers virtually all likely applications.

BATTERY OPERATION
The internal rechargeable battery option allows field operation away from the bench. A built in power management circuit prevents erroneous measurements.

CRYSTAL CONTROLLED PERFORMANCE
1 kHz test frequency insures wide temperature range accuracy. (Other frequencies optional)

PROTECTED CIRCUITRY
The IMF-600 will handle charged capacitors and active powered circuits on all functions.

ANALOG & DIGITAL OUTPUTS
Analog and optional digital outputs may be used to interface to comparator or other devices.

4-TERMINAL SHIELDED KELVIN TEST TERMINALS
Insures precision measurements even for very low impedances like contact or wire resistance, as well as high impedances.

COMPANION COMPARATOR UNIT
The Model LC-603 Digital Limits Comparator can test or select any component or function within upper and lower limits, and may be cascaded for D or (1/Q) sequential checking. The combination becomes an economical GO/NO GO test or selection system.

GAS SENSORS

Japan Electronic Manufacturers Agency represents the world's leading gas sensor manufacturer. Their technical expertise has led them to produce the most innovative sensors in the world market. Each is solid-state, mainly composed of a sintered tin dioxide which detects gases through an increase in electrical conductivity when the reducing gases are absorbed on the sensor's surface. The excellent stability and performance of the sensors provide unique features in gas detection.

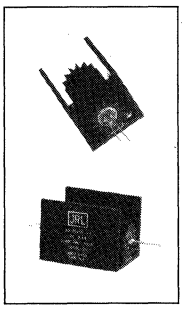
CH-48T4HK OIL FILLED FOUR TERMINAL PRECISION HEAT-SINK RESISTORS

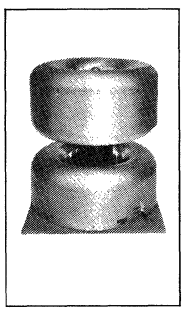


JULIE RESEARCH, for 35 years a leading manufacturer of ultra-precise, ultra-stable wirewound resistors, has developed the CH-48T4HK Precision Resistor featuring high accuracy, high dissipation power, and low self-heating coefficient at low ohm values.

The CH-48T4HK is a hermetically sealed, oil-filled, four terminal resistor mounted on a specially designed heat sink. The heat sink is optimized for maximum heat dissipation, keeping the internal temperature rise at high currents to a negligible value. The metal encasement of the CH-48T4HK increases the dissipation power and decreases the thermal time constant, thus providing a self-heating coefficient as low as 0.0025% per watt.

The CH-48T4HK is available in the resistance range of 0.1 to 100 ohms, and with accuracy from 1% to 0.002%. For further details, contact Julie Research Laboratories.

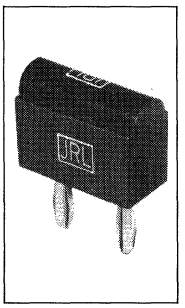
HVA-50 AND HVA-100 PRECISION AC/DC HIGH VOLTAGE DIVIDERS



The HVA Series High Voltage Dividers are designed as calibration standards of DC and AC voltages up to 100 KV (HVA-100) or 50 KV (HVA-50). These dividers feature accuracy better than 0.01% DC, and better than 0.05% at 60 Hz. They also have a stability within 0.005% per year.

The unique shield structure of the HVA Dividers produces no appreciable capacitance. In normal laboratory environments, temperature coefficient, humidity effects and proximity effects are negligible. For further details, contact Julie Research Laboratories.

PRS-1 PRECISION BANANA-PLUG STANDARD RESISTOR

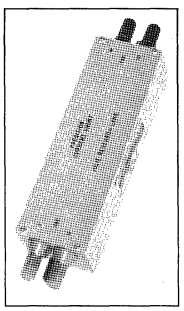


For production prototypes, laboratory plug-in standards, and easy assembly of resistance sets, Julie Research Laboratories has developed the PRS-1 Banana-Plug Standard Resistor. Some of its outstanding features are high accuracy and stability, low temperature coefficient, and compact, convenient banana-plug styling.

The PRS-1 is a high temperature epoxy encapsulated resistor which readily plugs into normal banana jackets with 3/4" spacing. The combination of this design and the high accuracies available allow the PRS-1 to be plugged directly into resistance bridges for calibration purposes. When used in production, its accuracy and stability can eliminate the need for "trimming" potentiometers.

Values of the PRS-1 range from 1 ohm to 2 megohms. Absolute accuracy is available from 1% to 0.0025%. For further details, contact Julie Research Laboratories.

CS-105 SERIES PRECISION AC/DC CURRENT SHUNTS



The CS-105 Series Current Shunts use a special Julie Research Laboratories designed frequency-compensated, wirewound or ribbon resistor with an AC-DC difference accuracy of less than 0.02% at 20 kilohertz. Each of the shunts is designed to provide approximately 1 volt output when used in conjunction with our TNB-102/T2.5 Thermocouple, thus forming a unique instrument in the measurement of AC/DC currents.

The CS-105 Shunts are available in values from 0.005 amperes to 50 amperes. For values up to 200 amperes, see our CS-106 Series Current Shunts. They can be purchased individually, or in sets. For further details, contact Julie Research Laboratories.

SATURATED STANDARD CELL OVENS

The best voltage reference possible must meet two basic critical requirements —

1. Time performance; the three saturated cells used must have minimum output voltage change with time.
2. The enclosure must maintain its nominal temperature with time.

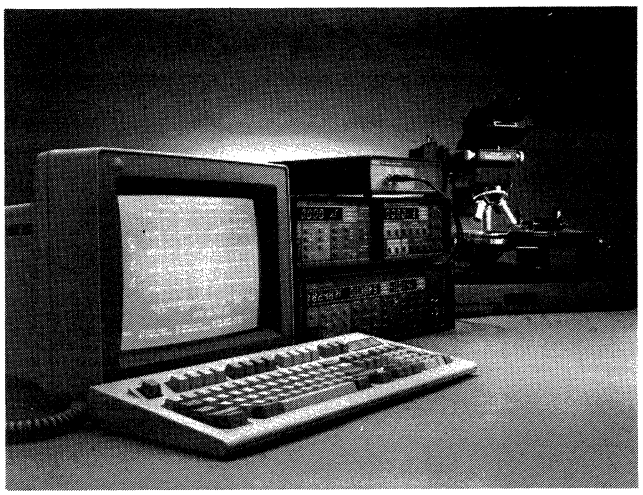
Model 251 I-V Test Software

Interactive testing of current vs. voltage is easily controlled from a PC for complete characterization of semiconductor devices. This software uses fast and sensitive Source-Measure Units to measure and display I-V curve families, breakdown voltage, leakage current, DC or differential gain and resistance. A library of standard tests is supplied, and there is no programming or knowledge of GPIB commands required.



Model 82 C-V System

Menu-driven software steps through the process for fast and accurate C-V analysis. It corrects for system leakages and cabling effects, finds oxide capacitance and equilibrium sweep rate, makes simultaneous high frequency and quasistatic C-V measurements, analyzes the data, and plots the output graphs. All of the calculations and graphs commonly used for C-V analysis are included, such as Dit, doping profiles and band bending.

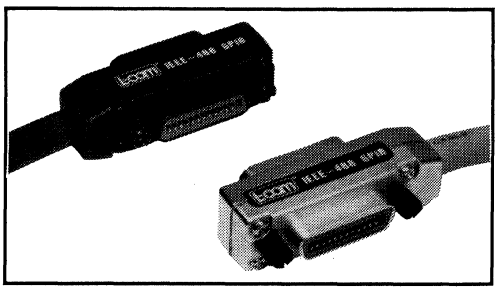
L-com® IEEE-488 CABLE PRODUCTS



IEEE-488 Cables - *Meet or Exceed Industry Standards*

L-Com General Purpose Interface Bus (GPIB) cables are designed and assembled to the latest IEEE-488 standard, "Interface for Programmable Instrumentation". Careful consideration has been given to design and materials to provide cables that are very flexible and have better-than-average strain reliefs to prevent cable failure when bending at sharp angles. **L-Com** Premium and Deluxe cables have tough nickel-plated cast aluminum connector shells for maximum protection against damage. Standard-grade cables have resilient molded cable ends for long life in rough service.

IEEE-488 cables are used for interconnection of programmable measurement and instrumentation devices to form integrated systems. **L-Com** cables are designed to minimize cross talk between signal lines, susceptibility to external noise and signal transmission to external environments. They are directly interchangeable with equivalent HP, AMP and Amphenol cables.

CIB Series Premium IEEE-488 Cables -

The finest GPIB cables available anywhere. 4 shields (2 braid, 2 mylar) for best EMI performance. Nickel-plated cast aluminum shells with 4 assembly screws withstand severe abuse. UL recognized insulation. **(MB)** suffix on model numbers indicate all black, no-glare finish, same price. Six types only.

IEEE-488 Accessories - Carefully Study These New and Useful IEEE-488 Products

L-com is the first company to offer a full line of IEEE-488 accessory products to the instrumentation industry. Some of these innovative components are proprietary, a direct result of listening to many engineers and technicians. Possibly, you will also find these accessories useful in your day-to-day test or production activities. Fabricated from the best materials for a long and useful life, these products will mate perfectly with **all L-com** IEEE-488 Cables and equivalents.

GPIB Bulkhead Adaptors - The Easiest Way to Feed GPIB Cables Thru Panels

IEEE-488 Bulkhead adaptors originated because of a need by design and test engineers. These adaptors provide the best means of passing an IEEE-488 cable through enclosure walls and panels, and will also provide access to a console work table when mounted on a panel.

Two basic models are available. The "BA" version has the conventional male - female entry, whereas the "BF" version has two female entries. The latter allows more than one cable to be mounted piggy-back on both sides of the panel.

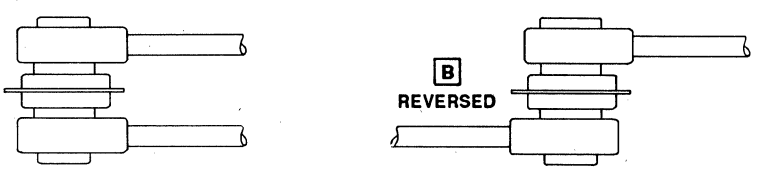
Reverse Entry Adaptors - The Ultimate Solution for Many Difficult Situations

A new twist has been added to IEEE-488 networking by the introduction of Reverse Entry adaptors as listed below. Normal entry has always been to exit the GPIB cable in the same direction as it entered, as shown in figure "A". However, there are many instances when it is beneficial to exit a cable in the reverse direction as shown in figure "B". The need is sometimes prompted because of interference caused by other cables or equipment being in the way. A variety of reverse entry adaptors are now available as listed below.

CABLE ENTRY



Bulkhead Adaptor - With Reverse Entry for Those Unusual Requirements

Very similar to the model CIB24BF listed above except that the cables exit in opposite directions. This feature is sometimes desirable and necessary to avoid nearby obstructions.

CIB24BFR	Reverse Entry Bulkhead Adaptor, F-F	B	26.50

GPIB Adaptor - Reverses for Easy Extension of Two Standard IEEE-488 Cables

Normally when an attempt is made to mate and extend two standard IEEE-488 cables, the result is that the cables tend to go in the same direction as shown in entry A. The XFR Reverse Adaptor will properly orient the two cables so as to be in line as shown in entry B. The double female entry makes it easy to assemble. Made of cast aluminum for light weight and durability.

CIB24XFR	180° Reverse GPIB Adaptor, F-F	B	21.00

Reverse Adaptor - Changes Cable Direction 180° to Expedite Wiring Procedure

This is probably the most versatile adaptor to have handy just in case an IEEE-488 cable exit interferes with other equipment on the same rack. Simply install the Reverse Adaptor between the receptacle and GPIB cable.

L-com® IEEE-488 ACCESSORIES

MODEL	DESCRIPTION	ENTRY	1-9

IEEE-488 Accessory Products - Useful Add-ons For Your GPIB Network System

A few more accessory products have been developed to aid the test engineer in his day to day work. Listed below is a mixture of products, all related and useful in the networking procedure of an IEEE-488 system. Do study each item and consider its usefulness in your particular environment.

Right Angle Adaptor - Used to Change Direction and Avoid Tight Cable Bending

This adaptor is handy to have and to use whenever the cable direction needs to be turned 90° to avoid obstacles that would otherwise demand sharp bends in cable placement and possible cable damage. All molded construction.

IEEE-488 Extender - This Handy Device Provides a One Inch Added Clearance

Our extender is sometimes used to provide a one inch extension allowing right angle cables that extra margin to clear adjoining obstacles. A very handy item to have on hand in case of an emergency situation. Made of cast aluminum.

CIB24X	GPIB Extension Adaptor, M-F	A	19.50

Slimline Extender - Fits Undersized Openings and Provides 1" Added Clearance

With the advent of more and more IEEE-488 interface boards being installed into personal computers, there is a need for an extender that will allow the right angle GPIB connector to extend further out. However, the problem is further compounded by the fact that some computers did not take IEEE-488 usage into consideration, and as a result the cabinet entry hole is too narrow because it was designed for a conventional D-Sub connector. The ultimate solution is the **Slimline Adaptor with a width of only 0.9",** and still provides the usual 1" extension. Made of cast aluminum.

CIB24XCR	Reverse Slimline Adaptor, M-F	B	24.00

Connector Covers - Protect Against Contamination, Physical Damage and RFI

A cast aluminum cover that mates to the female end only. This cover has many uses such as in production or shipping to protect against dirt or damage to the exposed connector. In the lab, it provides the added service of warning, identifying, or limiting the port's accessibility. One piece cast aluminum construction with two machine screws which are captivated to prevent loss. Available in natural or black anodized finish. O.E.M. quantity pricing available and quoted upon request.

GPIB Adaptor Cable - Matches & Extends Two Standard IEEE-488 Cables

L-com offers the *ultimate approach* in the CEX24 adaptor cable. A female-female extender (0.5 meter) designed expressly for the purpose of interconnecting standard IEEE-488 cables to create an extension and achieve "in-line" credibility. This product results from a need by engineers to make use of existing cables in their inventory to create longer runs.

It's true that all GPIB cables will interconnect with each other and will operate electrically, however, they do not usually mate properly (in-line) resulting in an unsatisfactory installation with potential harm to the cables if stretched or pulled too hard. The illustrations show how you would normally join standard GPIB cables used as extenders. Compare the use of traditional method "B" with the CEX24 shown in the upper illustration "A" - need we say more!

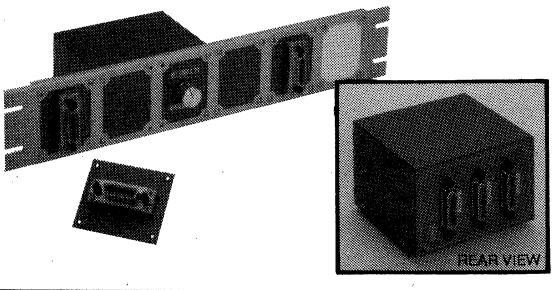
Universal IEEE-488 Transfer Switches - Allow a Quick Change of Signal Paths



These compact IEEE-488 transfer switch boxes measure only 5.5"W x 3.25"H x 4.35"D. Constructed of heavy gauge steel to withstand abuse and afford maximum RFI/EMI protection, Three switching variations are offered. The traditonal A-B two position type, and a newly devised version with a unique three position switching arrangement. The latter provides the ability to select peripherals A or B independently or both and connected to the system I/O as needed. A further option is to have the I/O port mounted on the rear or on the front panel.

A heavy duty rotary switch is used and all twenty-four lines are simultaneously switched for total isolation. These switch boxes can be used independently or will readily mount in two openings on the Universal panel listed above. These Handy Test Sets Diagnose Modular and Coax Cable Problems in Seconds

L-com has sensed a need for simplistic pocket-type testers required by field installers, service technicians and also by novices to locate their cabling problems. The test sets listed below employ high impact cases to withstand day to day abuse. They are easy to use and instantly identify whether a cable is good, open or cross wired. We urge third party maintenance organizations to inquire about quantity pricing considerations.

Modular Cable Checkers - Test any 2, 4, 6, or 8 Wire RJ Type Telco or Data Cable

Each of these pocket-sized instruments will instantly evaluate the integrity of any RJ11 or RJ45 or even the DEC MMJ equipped Modular Telco/Data cable. Easy to use, just plug in both cable ends, and the "two color" LEDs identify which pair shows continuity or open. Simultaneously, the color of the LEDs determine whether the cable is properly wired for data use with straight-thru pinning (lights red), or for voice communication with crossed pinning (lights green). Full instructions appear on the label. The high impact case is only 2.4" x 3.75" x 1.1" and operates from one alkaline 9V battery (included) with a life expectancy of many thousand tests. Saves time and guesswork. The ideal tool for the field technician or as a handy checker around the office.

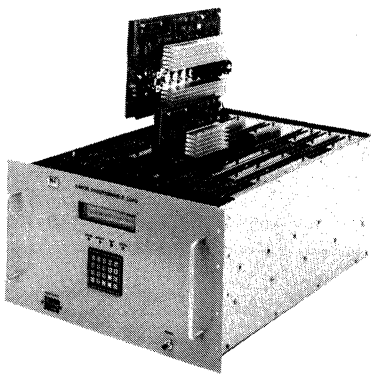
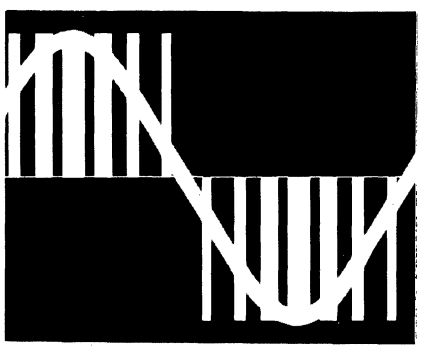
Dynamic Load Subsystem L4000 SERIES

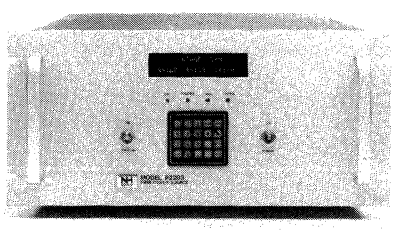


- ❑ Modular high density packaging saves rack space and simplifies maintance.
- ❑ Sophisticated diagnostics and software calibration specifically for use in ATE applications.
- ❑ IEEE-488, MATE (CIIL) or front panel keyboard control.
- ❑ Loads may be used in parellel up to 80KW, 3840 Amps.

The L4000 SERIES Dynamic Load Subsystems are designed using instrument-on-a-card load modules such that a single controller can control up to 32 independant and isolated load modules. The product is configured to match specific load requirements by selecting from a number of standard load modules. Each load module is programmable from 1.5V to 400V, constant current, constant resistance, constant voltage, constant power or pulse modes.

Programmable AC Power Sources P-SERIES



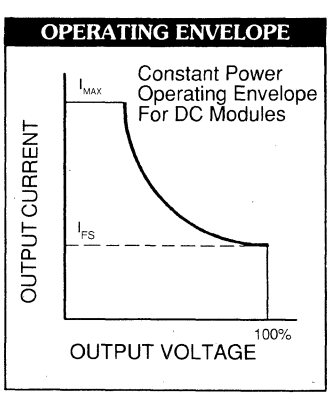


- ❑ High efficiency PWM design reduces size, weight and waste heat.
- ❑ High peak in-rush current for testing switching power supplies and other non-linear loads.
- ❑ Sophisticated diagnostics and software calibration designed specifically for use in ATE applications.
- ❑ Modular high density packaging saves rack space and simplifies maintenance

The key to the 85% efficiency of our PWM Series power sources in pulse-width modulation. The diagram shows how the sine wave output of our AC sources is created electronically, by a series of pulses whose widths vary according to the amplitude they represent.

For you, that means cooler operation, smaller size and less weight than conventional AC sources. With our PWM sources, you can save on the power that's producing wasted heat as well as the cooling power required to get rid of it.

Modular DC Power Subsystem S6000



- ❑ Up to 12 DC Supplies in Single 5 1/4 inch Chassis.
- ❑ Constant Power Operating Envelope.
- ❑ Controllable via IEEE-488.2, SCPI, MATE/CIIL, VXIbus programmer.

The S6000 brings modular DC Power to a new level, combining high density packaging with comprehensive selftest and control. Up to six single (400W), or dual output (200W per channel) modules may be installed into a 5 1/4" chassis. Because the power modules are "constant power" designs, they can deliver current up to any point within their operation envelope. This benefits overall station design because fewer modules are needed to cover a wider range of UUT requirements.

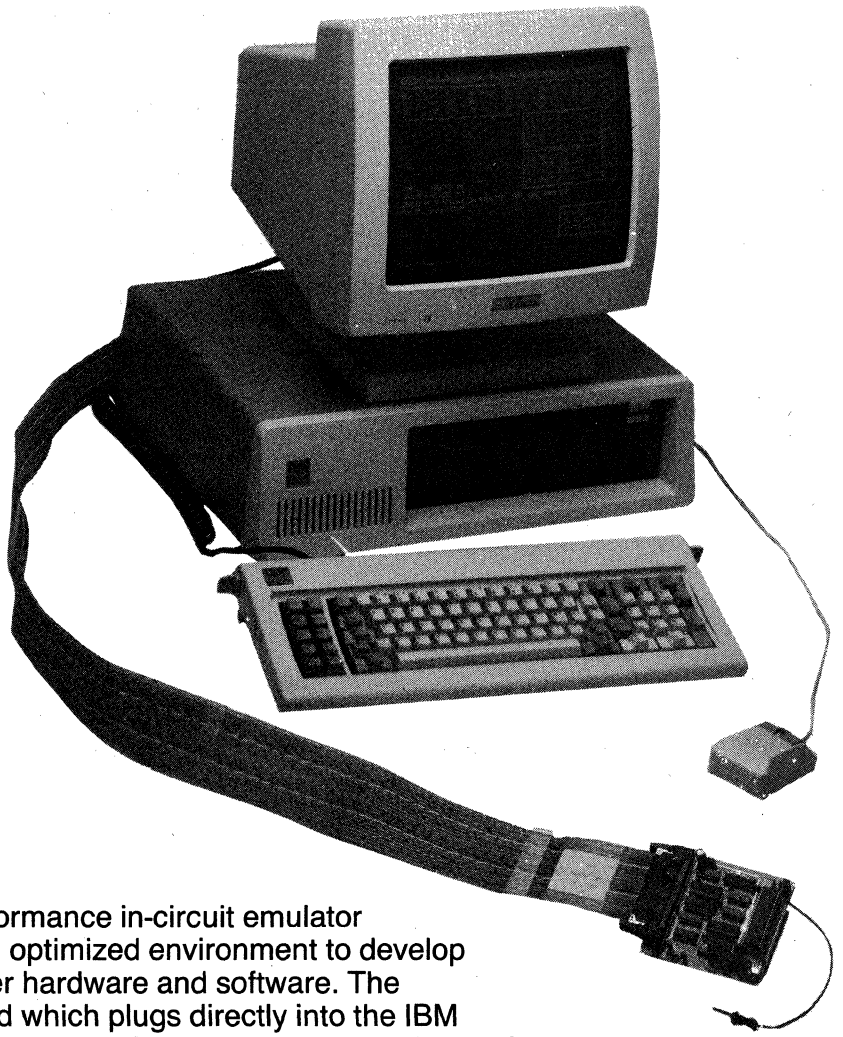
8051 Family In-Circuit Emulator



New! Simul-51 Simulator for the 8051. Same interface as Emul-51. Runs on PC without Emulator hardware.

The EMUL51-PC is a high performance in-circuit emulator specifically designed to give an optimized environment to develop your 8051 family microcontroller hardware and software. The EMUL51-PC consists of a board which plugs directly into the IBM PC/XT/AT bus. The optional Trace board features an advanced trace function with sophisticated trigger capabilities.
The POD, which plugs into the target system, is connected with a 5 ft. ribbon cable to the emulator board to provide a flexible operating range.
This is a unique architecture. It ensures that there are no external boxes or power supplies cluttering your workbench. Nor is there any serial channel to slow down the emulation process.

User friendly

The friendly user interface is one of the key features of the EMUL51-PC. Pull-down menus, mouse support and on-line help make the infrequent user feel instantly at home. The more experienced user will appreciate the fast command line interpreter and the comprehensive command set with powerful macros.
The data windows on the screen contain up-to-date information on symbols and memory areas. All commands are supported with context sensitive help information. If more help is needed the whole manual is on-line, available with a key stroke.

Source level debugging

Using a high-level language for code generation is a way to cut development time. Therefore the EMUL51-PC gives full support for debugging directly in C, PL/M or PASCAL source code. This is a breakthrough in software debugging and eliminates tedious symbolic debugging in assembler.
With the EMUL51-PC you can mark breakpoints directly in the source code window, and it's easy to follow the program execution on the screen listing. All variables, both local and global, can easily be displayed or altered in one of the dedicated windows. Naturally all variables are displayed in the form they were declared in your software. This way you can work directly with floats, arrays, pointers, structures, etc.

Real time Trace

The EMUL51-PC offers trace features not found in other emulators. For instance the trace buffer can record over 16,000 bus cycles with 48 bits of data. The trace can be operated "on-the-fly" which means that it can be viewed, programmed and retriggered without disturbing program execution.
With the trace set-up menu it is possible to define exactly what events are to be stored in the trace buffer. The real-time trace can be stopped (triggered) at a selected event or after a combination of multiple events. By aligning the trigger point anywhere in the trace buffer you have a full choice of pre- and post triggering.

Trace operation
At each cycle of execution 48 bits of address, data, ports and external signals are compared with eight independent "48 bit registers" to produce eight "condition signals". These eight conditions are then combined with six bits from a "64 state state-machine". The combination of these 14 signals creates a new state (or retains the old state). It also produces a TRIG and a FILTER signal that are used to control what is saved in the trace buffer. If the eight condition signals are named A, B, C, D, E, F, G and H an example of how this could be used follows:
A THEN B THEN C THEN D THEN E THEN F THEN G THEN H where A - H could be code addresses.

The trace buffer can be viewed, reprogrammed and restarted without affecting emulation.

Trigger Breakpoint
The 48 bit trace trigger qualifiers can be used to define complex breakpoints also on program execution.

Trace Display
Display trace in disassembled symbolic or binary/hex form, or as high level source code. Display can be saved to a file.
Trace can be started, stopped and displayed independent of program execution.

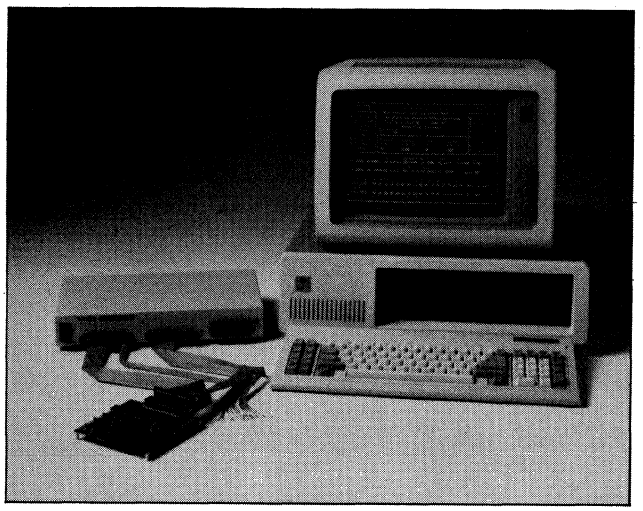
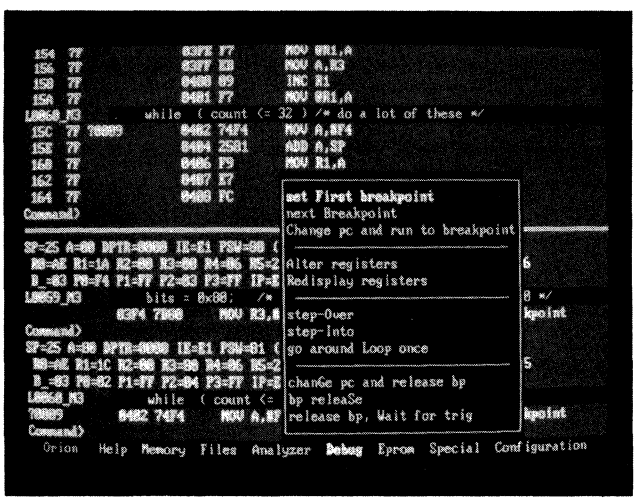
UNILAB 8620

ANALYZER-EMULATOR

Emulators



UniLab the universal system for rapid development of embedded processor systems.



UniLab split screen display includes analyzer trace and breakpoints with high level language source lines. Also shown is PopUp menu interface with debug selections.

More Emulation For Less Cost

The UniLab 8620 combines a bus-state analyzer with an emulator to provide more capability and faster debugging than traditional in-circuit emulators. Whether you're working on single-chip controllers or high speed 8- and 16-bit microprocessors, the UniLab 8620 handles them all at a low, low price.

Over 170 different processors are supported by the same universal system, all with the same software environment. Support for additional processors requires only the purchase of an inexpensive Processor Personality Pak (PPAK).

SOFTWARE DEVELOPMENT TOOLS

- High Level Language/Symbolic debug support for a wide variety of development software packages.
- Source Tracking automatically displays the corresponding sections of your source file in its original format while you work.
- UniLab's trademark ability to debug by symptom with the analyzer—not just breakpointing and single stepping.
- Easy to learn and use PopUp menu interface.
- Program Performance Analysis computes both address and execution time histograms by gathering information while the target system runs at full speed.

INTEGRATED HARDWARE COMPONENTS

- A 48-channel bus state analyzer for real-time trace without stopping the processor.
- 32K to 128K emulation ROM.
- A generous 2730 cycle trace buffer with powerful triggering and selective filtering.
- Integrated EPROM programmer (handles 2716 thru 27512) and stimulus generator built right into the unit to help you quickly complete your project.
- High speed parallel interface zips data between your PC/AT and the 8620 fast—64K bytes from hard disk to emulator in 5 seconds.

UniLab 8620 Supports Over 170 Processors including:

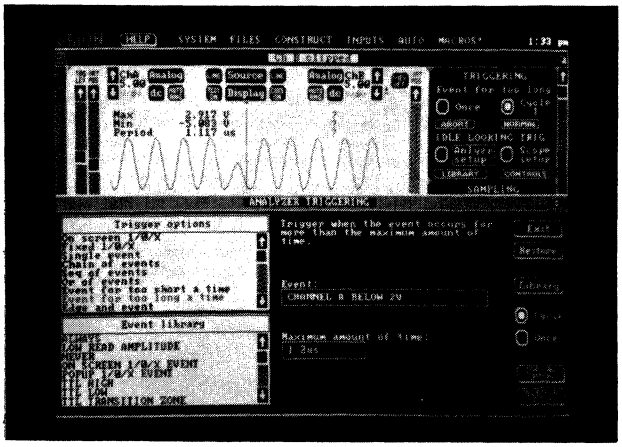
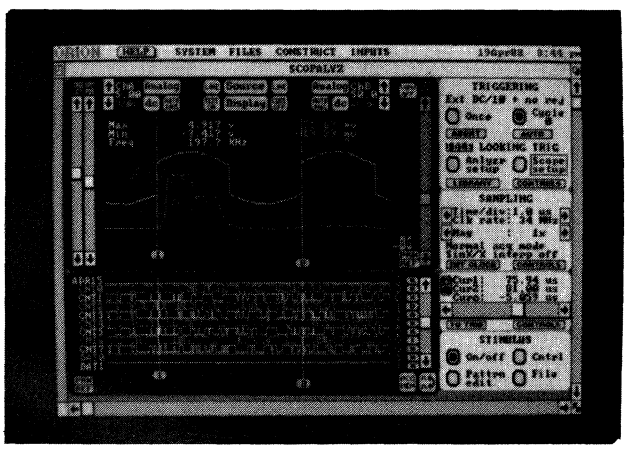
OMNILAB 9000

PROGRAMMABLE BENCH TOP TESTER

Instruments



Time aligned displays
Measurements from the scope and from the state or timing analyzer are time-correlated for an unprecedented view of relationships between analog and digital events.



Detect dropouts in a continuous waveform using window triggering
Triggering logic continuously examines analog signals for a value below 2 volts for more than 1.2 microseconds. Any of the other digital and analog inputs could also be examined simultaneously.

Please call to request more information, a free demo disk, and the macro cookbook.

SIGNAL CONDITIONERS

PPM SIGNAL CONDITIONERS AND AMPLIFIERS PROVIDE ULTRA-STABLE EXCITATION, BRIDGE BALANCE, AND CALIBRATION CIRCUITS FOR USE WITH STRAIN-GAGE AND RTD TRANSDUCERS.

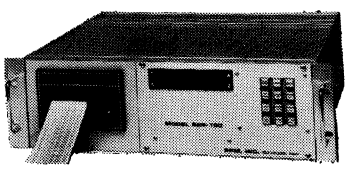
MODEL SG-16-3 (SHOWN) CONTAINS A STABLE, LOW-NOISE, EXCITATION POWER SUPPLY, A PRECISION, ADJUSTABLE-GAIN, WIDE-BAND AMPLIFIER, WITH A 4-STEP, TWO-POLE, LOW-PASS FILTER (OPTIONAL), HIGH-RESOLUTION AUTO-BALANCE CIRCUIT, AND 4-STEP, BI-POLAR SHUNT CALIBRATION CIRCUITRY.

TEN UNITS PLUG INTO A 19-INCH RELAY-RACK-MOUNTING CABINET, 7 INCHES HIGH.

EXCITATION IS EITHER CONSTANT VOLTAGE OR CONSTANT CURRENT, 0-15V AND 0-100 MA. AMPLIFIER STABILITY IS LESS THAN ONE MICROVOLT/DEG C. BANDWIDTH IS GREATER THAN 100 KHZ.

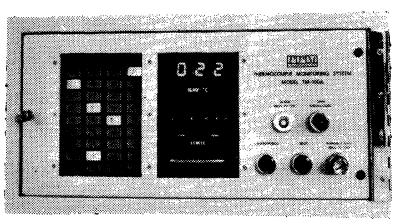
THE MODEL SG-16-4 SERIES PROVIDE SIGNAL-CONDITIONING FOR VARIOUS TYPES OF SIGNALS (DC, AC, FREQUENCY, TEMPERATURE, POWER FACTOR, ETC.) WITH INPUT-OUTPUT ISOLATION GREATER THAN 1500 VOLTS.

THE MODEL SG-160 SYSTEM USES COMPUTER CONTROL TO SET ALL FUNCTIONS, INCLUDING EXCITATION VOLTAGE, BRIDGE-COMPLETION AND CALIBRATION RESISTORS. BALANCE IS AUTOMATIC. THIS "STATE-OF-THE-ART" SYSTEM ELIMINATES MOST MANUAL SET-UP OPERATIONS, INCLUDING SOLDERING.



SEQUENTIAL EVENT RECORDERS

THE MODEL SER-100 SERIES OF SEQUENTIAL EVENTS RECORDERS PROVIDE A PRINTED RECORD OF THE TIME AND SEQUENCE OF INDEPENDENT ON/OFF EVENTS OCCURRING AT A NUMBER OF POINTS. THE SER-100 MAY BE SET TO RECORD EITHER THE TURN-ON TIME OR THE TURN-OFF TIME, OR BOTH, ALONG WITH THE POINT IDENTIFICATION.



THERMOCOUPLE MONITOR

THE MODEL TM-100A SCANS UP TO 100 THERMOCOUPLES, DISPLAYING TEMPERATURE DIGITALLY. A HIGH/LOW LIMIT CIRCUIT COMPARES THE TEMPERATURE WITH PRESET SWITCH SETTINGS; A LAMP MATRIX DISPLAYS ALL OUT-OF-LIMIT CHANNELS. INTERFACES PROVIDE FOR PRINTOUT OR COMPUTER ENTRY OF DATA.

FREQ.-TO-VOLTAGE CONVERTERS

THE MODEL FVI-5 FREQUENCY-TO-VOLTAGE CONVERTERS ARE USED TO CONVERT THE FREQUENCY OF AC SIGNALS FROM TURBINE TYPE FLOW-METERS, OR SIMILAR INSTRUMENTS, TO DC VOLTAGES FOR MEASUREMENT OR CONTROL APPLICATIONS. A NEW TECHNIQUE PROVIDES ZERO RIPPLE IN THE OUTPUT FOR CONSTANT INPUT FREQUENCY.

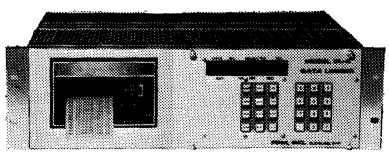
DECADE RESISTOR BOXES

PPM DECADE RESISTOR BOXES AND RESISTOR STANDARDS FEATURE BULK METAL FOIL RESISTORS WITH EXCEPTIONAL STABILITY AND EXTREMELY LOW SERIES INDUCTANCE AND SHUNT CAPACITANCE. TEMPERATURE STABILITY OF 1 PPM PER DEG C IS AVAILABLE ON MANY RANGES.

THE MODEL R4 SERIES IS AVAILABLE WITH EITHER FOUR SWITCHABLE DECADES OR THREE SWITCHABLE DECADES PLUS A 100 DIVISION PRECISION RHEOSTAT. THE R4 UNITS USE A 3-INCH DIAMETER CAN, FOR BUILT-IN APPLICATION.

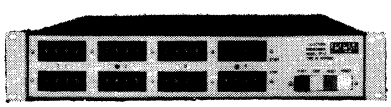
THE MODEL RX SERIES ARE AVAILABLE IN EITHER A RECTANGULAR METAL BOX FOR BENCH USE OR WITH FLANGES FOR RELAY-RACK INSTALLATION, WITH 3 TO 10 DECADES. THE SWITCHES USE SOLID-SILVER CONTACTS AT ALL POSITIONS TO ENSURE LONG LIFE AND LOW CONTACT RESISTANCE.

THE MODEL R-120-X SERIES OF RESISTANCE STANDARDS ARE FOR USE AS SECONDARY RESISTANCE STANDARDS. EACH HAS 12 EQUAL-VALUE RESISTORS WHICH MAY BE USED INDIVIDUALLY, IN SERIES, OR IN PARALLEL (WITH AUXILIARY SHUNTING BARS), TO OBTAIN PRECISION RESISTANCE COVERING A THREE-DECADE RANGE.



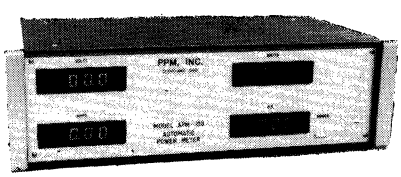
DATA LOGGERS

THE MODEL DL-3 IS A COMPLETE DATA ACQUISITION SYSTEM IN A COMPACT, PORTABLE PACKAGE. IT SCANS UP TO 256 INPUTS, DIGITIZES THEM, AND PRINTS OUT THE VALUES BY MEANS OF A BUILT-IN THERMAL PRINTER. OPTIONS INCLUDE: FLOATING DECIMAL POINT, INTERNAL CALENDER-CLOCK, STRAIN-GAGE OR THERMOCOUPLE CONDITIONING, COMPUTER INTERFACE, LIMIT COMPARATOR, AND ENGINEERING UNITS CONVERSION.



DIGITAL TIMERS-PROGRAMMERS

THE EP-SERIES OF DIGITAL ELECTRONIC PROGRAMMERS PROVIDE RELAY OR SOLID-STATE SWITCH OPERATION AT DIGITALLY-PRESET START AND STOP TIMES. EACH CHANNEL OPERATES INDEPENDENTLY. UNITS RANGE FROM 1 TO 1000 CHANNELS WITH TIMING FROM MICROSECONDS TO HOURS.



AUTOMATIC POWER METER

THE MODEL APM-100 AUTOMATIC POWER METER DISPLAYS "TRUE RMS" VOLTS, AMPERES, KW, AND POWER FACTOR SIMULTANEOUSLY ON FOUR 3.5 DIGIT DISPLAYS. FULL-SCALE RANGES ARE 1000 OR 199.9 VOLTS, 19.99 AMPS, 19.00 OR 1.999 KW, AND 1.000 POWER FACTOR. RANGE CHANGING IS AUTOMATIC. THE MODEL APM-10 PROVIDES THE SAME READINGS ON A SINGLE, SWITCHED, DISPLAY.

SIMPLE and ACCURATE

QUALITEC testers are easy to use. They can be operated accurately and consistently by low skilled personnel who have no prior experience with High Voltage testing. QUALITEC testers incorporate several non-destructive tests in one test cycle, including ARC detection, LEAKAGE CURRENT monitoring, INSULATION RESISTANCE measurement, and GROUND CONTINUITY monitoring with separate audible and visual failure alarms for each type of test; and indicates exactly which type of failure occurred for quick, easy, accurate troubleshooting of the device under test.

VERSATILE

QUALITEC testers have many features which allow versatile use by design engineers, test engineers, reliability engineers, quality control inspectors, production operators and others. A QUALITEC tester is versatile enough to be operated even by your personal computer which will allow you to record, analyze and print out test results. All of QUALITEC's AUTOMATIC Hipot Testers, Insulation Resistance Testers, Meghometers, and 10, 25, 30 Amp Ground Continuity Testers have DIGITAL PANEL METERS and are available with Remote Controls. QUALITEC testers have every feature you need...just **ASK US**.

COMPLIANCE

QUALITEC testers test in compliance to virtually all regulatory agency requirements including UL, CSA, VDE,IEC,BSI, BABT, TUV, FCC, JIS and MIL-SPECS.

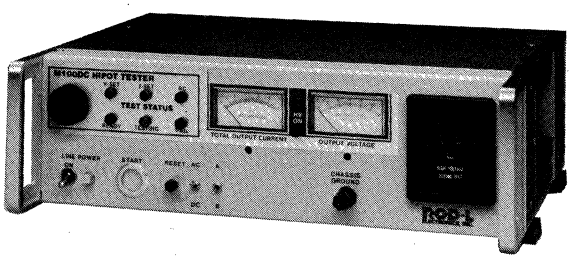
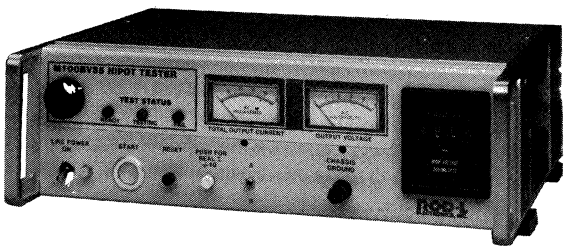
ROD-L ELECTRONICS, INC.

ROD-L Is The Only Manufacturer Of UL Listed Hipot And Ground Continuity Testers.

MODELS M100DC, M100 and M500 HIPOT TESTERS





Perform safe, rapid testing for dielectric withstand and ground continuity in one simple operation.

The ROD-L Hi-Pot Testers are designed to perform the tests specified by U.L., I.E.C., C.S.A., V.D.E. and F.C.C. The hipot test is a potentially dangerous operation, so the ROD-L product line has been designed with emphasis on safety, on efficiency and on speed with which the test can be made.

SAFE, FAST AND EFFICIENT

With a ROD-L Hi-Pot Tester you get these standard features:

- electronically controlled voltage rate-of-rise to ensure gradual, smooth and consistent rise time (eliminates harmful voltage spikes).
- electronically controlled voltage shutdown. Fast shutdown (2 ms) prevents harm to operator and protects the device under test.
- electronic, adjustable timing circuit to provide accurate, reliable test time (1 sec to 90 seconds).
- front panel receptacle, rated to withstand 5000 VAC, for direct plug-in of device under test or for plug-in of test fixture; provides maximum safety and dramatically reduces the time required to perform the test.
- front panel voltmeter to indicate hipot output voltage; front panel ammeter to indicate current drawn by the device under test.
- concurrent dielectric withstand and ground continuity tests in a single operation. Security chassis ground test to ensure operator safety.
- completely solid state for reliability, TTL logic allows computer interface. Rack mountable. Performs all U.L., C.S.A., I.E.C., V.D.E. and F.C.C. etc., test requirements.
- detects arcs of minimum 10 microseconds duration

SIMPLE OPERATION

The hipot tester applies the test voltage to the device being tested for a duration of time preset from 1 second to 90 seconds. The device under test simply plugs into the front panel outlet, rather than being attached with clip leads. Clip leads can be used, however, for devices without a power cord.

Test limits for leakage current are preset by the user. In the event of failure, automatic circuitry turns off the high voltage within 2 ms, lights the "failure" lamp and sets off an audible alarm. This audible and visual alarm must be reset by the user. (Meets U.L. requirements).

Use a ROD-L Hi-Pot Tester for production line testing, incoming inspection, and in-product development.

POWER LINE INTERFERENCE AND ESD SIMULATORS.

Interference on AC or DC power lines and ESD are major causes of downtime on microprocessor-based products. Schaffner EMC provides equipment which enables engineers to simulate interference during product development. Protective devices can then be installed to improve product performance and greatly reduce interference susceptibility.

Schaffner offers a wide variety of equipment for simulating and diagnosing interference and ESD problems. The following is a review of the types of equipment offered. For more information, call 1 (800) 367-5566, or contact your local Schaffner Representative.

A. NSG 200 SYSTEM SIMULATES AC AND DC INTERFERENCE.

A modular system consisting of the NSG 200E Mainframe and any of six different Interference Simulator Plug-Ins. The various Plug-Ins simulate AC interruptions and dropouts, fast rise time pulses up to 2.5 kV, high energy pulses up to 3 kV or burst interference simulation up to 4 kV. DC interruptions can be simulated as well.

B. NSG 600 SYSTEM AUTOMATES CONTROL OF AC AND DC INTERFERENCE SIMULATION.

The NSG 600 Interference Simulator System generates all of the interference simulated by the NSG 200 System described above, utilizing microprocessor control. It can also be computer controlled to allow hands-free operation and report generation. The built-in microprocessor permits precise control of all operations.

C. NSG 500 SERIES OF HIGH VOLTAGE AND HIGH ENERGY GENERATORS.

These units are designed to deliver high energy and high voltage interference pulses to the equipment under test. The NSG 500C (shown) simulates interference commonly found on automobile electrical systems to the latest ISO and SAE specifications. The NSG 587 simulates lightning and high energy switching surges.

D. NSG 430 SERIES OF SIMULATORS.

Schaffner is the world leader in ESD simulation. We developed our first ESD simulator 15 years ago. The NSG 432 (shown) is our latest design. This functional unit has many features which duplicate events causing many field problems.

MULTIRANGE SHUNT

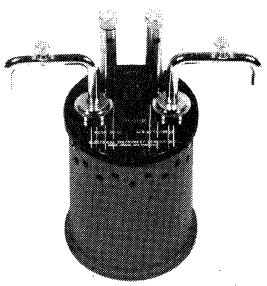
The Model MRS Multirange Shunt is designed for use with and extends the usefulness of "150 MV" potentiometers or precision digital voltmeters in the precise measurement of direct current (up to 15 Amperes) and in the calibration of DC Ammeters and Wattmeters.

The Multirange Shunt has eight ranges which are selected by a range selector switch. Each switch position indicates a multiplying factor and the maximum measurable value.

LOW VALUE RESISTORS

- metal case provides electrostatic shielding
- low power dissipation reduces errors due to self heating
- traceability to NIST (NBS)

SERIES RS REICHSANSTALT-TYPE RESISTANCE STANDARDS



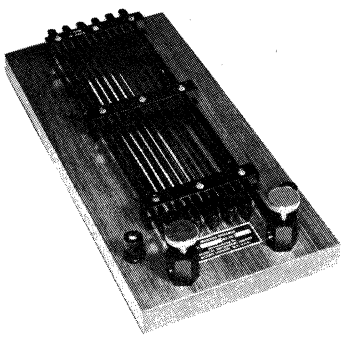
The Model RS Resistance Standard is constructed using a low temperature coefficient material mounted in a metal case through which oil can be circulated to maintain a constant temperature.

The specified value of the resistance standard is taken across a pair of "potential terminals" which are used for measuring the potential drop across the resistor.

LOW VALUE RESISTANCE STANDARD

- precision standard
- calibrate low value resistors such as multi-range shunt
- precision current measurement with potentiometer

SR SERIES SHUNTS



Primarily, these low resistance standards or shunts are used in accurate measurements of large currents by the potentiometric method. They may be used as comparison standards by either the adjustable ratio Kelvin Bridge or the potentiometric method. The nominal resistance is that as measured between the potential contacts.

The shunts have been designed to provide ample radiating surface for operation in air at ordinary room temperature at their rated current carrying capacities. A resistor of this type may be used in place of a Reichsanstalt type if a ±0.04% limit of error is satisfactory.

The SR-15(illustrated), SR-100 and SR-300 resistors consist of a continuous strip of one or more folds of a resistive material held in position by spacers.

LOW VALUE RESISTANCE STANDARD

- precision standard
- calibrate low value resistors such as multi-range shunt
- precision current measurement with potentiometer
- traceability to NBS

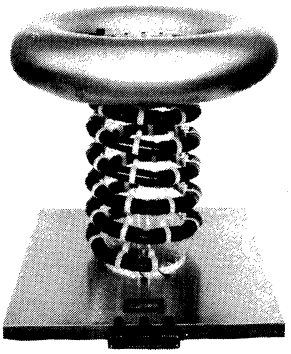
HIGH VOLTAGE MEASUREMENT



PARK

High Voltage Divider

Model PARK Voltage Divider is constructed to a design by J. H. Park. (Ref: "Journal of Research" of National Bureau of Standards, Engineering and Instrumentation Vol. 66C, No. 1, Jan.—Mar., 1962. Reprints available upon request.) It is similar to the NBS standard employed in their calibration of high voltage instruments. Each 100 kv divider consists of 100 individually shielded one-megohm resistors, matched to each other to achieve an approximate temperature coefficient of less than 1 ppm/°C, and connected in series to form a vertical helix between a ground plate and a high voltage electrode. Uniquely shielded, testing indicates that corona, heating and leakage errors are less than 10 ppm at less than 10 ppm at 50 kv and 50 ppm at 100 kv.

The divider's special "hat" is designed to give uniform gradients from the high voltage electrode to ground and allows stacking of additional 100 kv units for higher voltage measurements. Each unit is only 22¼" high! DC Ratio Accuracy: ±.05%, 100 kv to 1 v; ±.5%, 100 kv to 1 kv. AC Ratio Accuracy: ±.5%, 50 kv (max.) to 500 v. (60 cps only). Recommended readout instrument at 1 v output tap is a precision DC potentiometer, at 1 kv tap (.5 kv on AC) recommended instrument is a ±.5% accurate electrostatic voltmeter **(Sensitive Research** Model ESD described below).

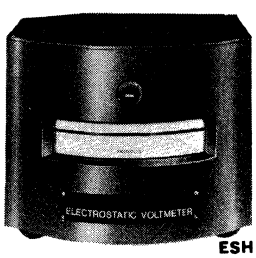
DCHI

Special High Voltage Dividers

Based on experience with the many Park Dividers already manufactured and their proved reliability, special designs have been constructed and proposed. These special dividers are essentially the same as the Park except for such criteria as sensitivity and size. Designs up to 600 KV DC at ±1% accuracy have been constructed and successfully used by our customers. Dividers for use up to 1,000,000 volts are under consideration. Although most designs considered so far have been for single ranges, there is no particular objection to building a divider with several ranges. Present certification by NBS is limited to 100 KV but higher ranges can be calibrated by "bootstrapping" methods.

DC Kilovoltmeter (multirange)

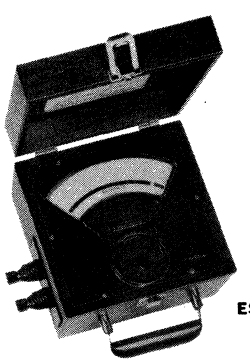
Model DCHI is a multirange permanent magnet moving coil, DC kilovoltmeter. Available at 50,000 ohms/v, ±1% fs accuracy, ranges of 1.5/3/7.5/15 kv or 3/7.5/15/30 kv, and at 75,000 ohms/v, ±.5% fs accuracy, ranges of 2/5/10/20 kv. The indicator is a University Model ±.5% accurate microammeter with a 4" scale length. It is self-contained in a moulded bakelite case and internally bracketed to the instrument panel. Size: 13¾" x 7½" x 8" h.



ESH

Electrostatic Voltmeter (high voltage)

Model ESH AC/DC electrostatic voltmeter is available as a single range instrument up to 100 kv fs (140 kv DC only), or with as many as 4 switch-controlled ranges from 5 to 50 kv fs. DC input resistances to 5 x 10^{15} ohms. Capacitance varies from approx. 30 mmfd on 5 kv range to 10 mmfd on 50-100 kv ranges. Reads true RMS. Accuracy is ±1% fs (±.5% up to 30 kv on special order). 6" scale length. Transit lock and brackets for panel mounting available. Maximum frequency usage is expressed as follows: $f = 2$ fCE, where $f =$ max. allowable operating frequency, $C =$ capacitance of instrument in farads, $E =$ voltage in volts.



ESD

Electrostatic Voltmeter (portable)

Model ESD portable AC/DC electrostatic voltmeter is available as a single or multirange instrument to measure from 120 to 6 kv fs. Insulation resistance is 1 x 10^{15} ohms. Capacitance varies from approx. 225 mmfd for a 120 v range to 20 mmfd for a 6 kv range. THERMOCOUPLE METERS AC-DC WATTMETERS

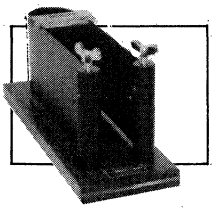
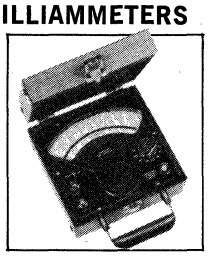
Thermocouple instruments offer the user significant advantages in frequency response and sensitivity over other AC types with true rms response. They can be used on DC and AC from 7 cps to 20 Mc/s, and in instances where UHF thermal converters are employed, this frequency range can be extended to over 100 Mc/s. **Sensitive Research** thermoelements have excellent AC/DC transfer characteristics (low reversal). Thermocouple instruments can be calibrated directly on DC and only their AC/DC difference, or frequency influence, has to be checked by AC transfer methods. A thermocouple field replacement feature (TRF) is supplied in the Models A and AU. Automatic or manual "Push to Read" overload protection is available. Automatic temperature compensation from 20° to 30° C is standard (except University Model).



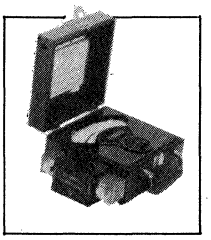
AUDIO FREQUENCY VOLT AND MILLIAMMETERS

Model A series consists of AC/DC multirange milliammeters and single or multirange voltmeters. Accuracy is ±0.5% fs (±0.75% for instruments with fs ranges of 3 ma or less or a sensitivity of 500 ohms/v). Multirange combinations are offered from 1 ma to 1.5 amps; 0.2 v to 1.5 kv. Frequency range is 7 cps to 7 Kc/s on voltage and 7 cps to 15 Kc/s on current. Sensitivity is 100, 200 or 500 ohms/v. 6.3″ scale length. (Single range milliammeters have a frequency response up to 1 Mc/s and are listed under Model RF.) Model AU is identical to the Model A, except frequency range is extended to 35 Kc/s on voltage and 20 Kc/s on current.



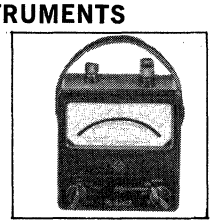
RADIO FREQUENCY VOLT, AMP AND MILLIAMMETERS

Model RF series consists of AC/DC single range and multirange instruments for use up to 20 Mc/s. Model RF multirange voltmeters utilize special switching to increase frequency range considerably beyond normal limits of other instruments containing this operational feature. Frequency influence is negligible over the first 20% of their frequency span. Accuracy is ±0.5% fs + (±0.5% max. frequency influence) on multirange units from 1 v (5 Mc/s) to 300 v (150 Kc/s). Instruments with a single range of 1 v or 3 v have a ±0.5% frequency response to 10 Mc/s. RF ammeters and milliammeters are available with accuracies of ±1% fs from 1 ma to 100 amps. 6.3″ scale length.



COMPACT THERMOCOUPLE INSTRUMENTS

University Model comprises a series of ±0.75% accurate, low cost, small sized milliammeters and voltmeters for AC/DC measurements up to 7.5 Kc/s (single range milliammeters up to 500 Kc/s). Multirange instruments are switch controlled. Up to 7 fs ranges available from 2 ma to 1 amp or 200 mv to 300 v (100 or 500 ohms/v). 4″ scale length. University Model is comparable in general construction quality to Model A, but has certain limitations in range, frequency response, resolution and the accessory features it can contain (temperature compensation, TRF, etc.), because of relatively small size.



POLYPHASE WATTMETERS

Model PDW is a multirange 2 element AC/DC electrodynamometer wattmeter for the measurement of single and 3 phase power down to 50% PF and up to 800 cps. Can be used in 3 phase 3 wire circuits, single phase 3 wire circuits and 3 phase 4 wire circuits. Indicates 3 phase power for any combination of balanced or unbalanced loads. Accuracy ±0.5% fs. 6.3″ scale length. Model PDLW is a ±0.75% accurate wattmeter for use down to 20% PF and up to 500 cps. 5.2″ scale length. Compensating inductor available for third leg of 3 phase circuits to balance load imposed by wattmeter insertion.

Complex Events

Event is a set of conditions that control the operation of complex program breakpoints and trace start/stop logic in real time.

There are 3 complex Events available, each consisting of the combination of the following:

- 256K address breakpoints or ranges
- 8 bit Data pattern with less than, greater than, equal, not equal, and don't care combinations
- RD, WR, INT, instruction fetch, operand read as qualifiers
- External input with programmable trigger polarity

In addition Events can be counted/delayed by the use of two 16 bit Pass Counters. An eight level hardware sequencer is available to sequentially trigger from/to any Event or Pass Counter.

Breakpoints

Breakpoints are used to stop user program execution preserving the current program status. Breakpoints can be triggered from a combination of:

- Address or range of addresses
- Complex Events
- Register value match
- External input
- Pass Counters
- Sequencer
- Trace full condition

Trace buffer

Trace buffer is a high speed RAM used to capture in real time all activity on the microprocessor internal bus and pins. A dedicated start/stop logic allows for filtering unwanted information from the trace buffer. Buffer will remember the selected 32K samples (frames) comprised of the following:

- Address Bus
- Data Bus
- Control signals
- All I/O pins
- Real Time Clock Stamp
- User logic inputs (8 bits)

Trace can be started/stopped by the combination of:

- GO command
- Complex Events
- Pass Counters
- Sequencer
- Trace Full condition

Additionally Trace Buffer is equipped with a special internal counter to allow tracing to stop after a specified number of frames. This feature allows Trace to catch as much as 32K of small fragments (snapshots) of executed program at full running speed.

The Trace contents can be examined during program execution without slowing down the microcontroller.

Battery Element Testers

Models Available For Both Moist and Dry Charged Cells

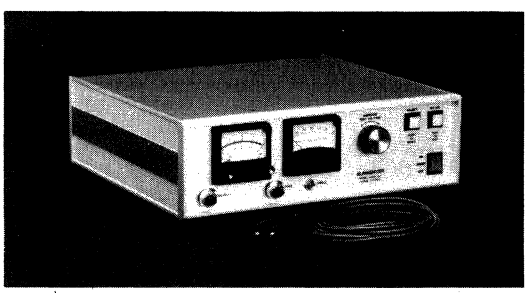
Briefly, these testers subject the battery elements to a high voltage which appears between all plates and across all separators. If everything is normal — that is, if there are no defects in the separators, no runs, no trees, etc. — the battery element will withstand the test voltage and only a normal amount of leakage current will be registered by the test instrument.

Proper test voltage for any particular battery element must be established by the user. Generally this will be in the range of 1,000 to 1,500 volts for elements with separators of less than .045", unless some marginal defects can be tolerated. For separators in the range of .045" to .065", a voltage in the range of 2,000 to 3,000 is normally required.

"Fail-Safe" 120 K Insulation Testers

The Series 1300 Testers are specifically engineered to conform with regulations first instituted in 1983 which are commonly referred to as "120 K Requirements".

Test voltage is continuously variable and monitored by a single built-in voltmeter. Sensitivity may be adjusted over a load current range. The 120-K ohm resistor terminals on the front panel allow the operator to check instrument calibration quickly and easily at any time. Audible and visual signals are locked in upon reject and must be manually reset before testing can be resumed. In the unlikely event that the Reject/HV Cut-off Circuit should fail, the instrument will go into the reject mode on the next bad part and will not reset. This protects the operator from shock hazard and from passing bad parts while unaware the Reject/HV Cut-off Circuit is inoperative.

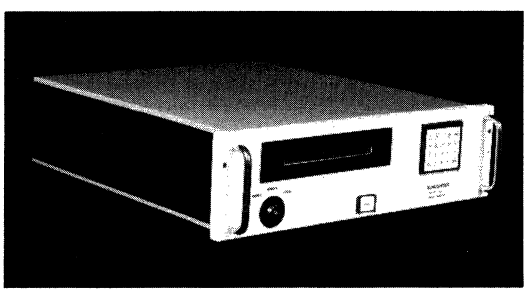


Coil & Winding Testers

- Tests Solenoids, Chokes, Transformers, Stators, Armatures, Etc.
- Exposes Shorted Turns as Well as Opens and Grounds

The surge test is without question the most comprehensive single test used to check coils and windings. In addition to shorts, opens, and grounds, the surge test can also expose latent defects such as shorted turns which will not show up on other types of tests. From simple solenoids through chokes, transformers, stators, and armatures, the surge test is a necessary step in the manufacture of all high quality wound products.

Though the instantaneous energy is high, average energy levels are low. Therefore, the high voltage stresses required to conduct a good test are produced without damaging good parts.



Programmable Testers

IEEE-488

- AC INSULATION TESTER
- DC INSULATION TESTER
- MEGOHMMETER
- SWITCHING MATRIX

The basic purpose of the Series 1727 testers is to provide a fully programmable high voltage source with current sensing capabilities for use in a computer controlled system. Additionally, most are programmable from the front panel.

EXPERIENCE SINCE 1977

In-circuit programming is easy. All you have to do is plug your circuit card into one of our in-circuit programmers and program the entire circuit card as if it were one large device. Reprogramming is easy. Simply drop your circuit card into our board size eraser and then into the programmer. Component handling is reduced. Sockets and labels are eliminated and the quality of your product improves.

Let us do the engineering, design, software, fabrication and testing for you. We can provide a complete turnkey in-circuit programming solution at a price lower in cost than what you ever thought possible.

Sunrise has been producing memory board programmers since 1977. All of our programmers are designed and built to military standards and field proven in the desert and at sea.

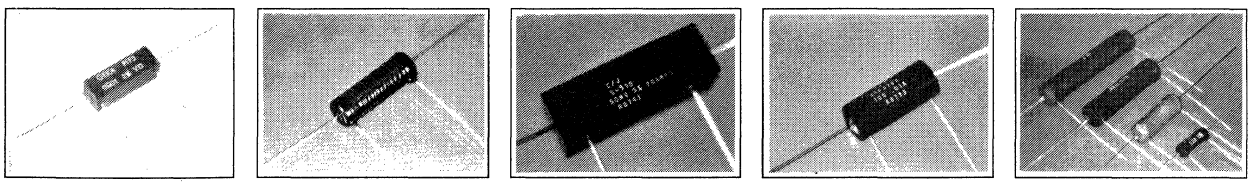
Axial/Radial Leaded Current Sensors



Precision Current Sensors are not normally considered high current devices. For high current and power devices, refer to EEM section 4700, Precision Current Shunts, VISHAY Electronic Components Group.

From the various VISHAY Electronic Components Group's facilities around the world, comes a range of products based on resistive foil, wire, thin film and thick film technologies. Precision current sensors from 0.005 Ω to "K" range values are available in a variety of four terminal configurations. Tolerances of ±0.001% are available, depending upon the device and resistance values. TCR as low as ±1 ppm/°C is available over limited temperature ranges.

Both thin film and thick film technologies are available in chip form with sub-ohmic values and four terminal wrap-around terminations.

RESUMÉ

Walker Scientific Inc. is part of the Walker Magnetics Group which has been in magnetics since the late 1800's.

Our dedication to the science of magnetics has enabled us to develop product lines which have advanced the state-of-the-art in many disciplines: Magnetic Measuring Instrumentation for analyzing magnetic fields and Laboratory Magnet Systems for producing magnetic fields, have made us a leader in magnetic systems and instrumentation throughout the world.

In addition, two new product lines have been added to further broaden our instrumentation base; Magnetic Charging and Conditioning equipment and instrumentation to meet the ever increasing demands of quality for Nondestructive Testing (NDT) of materials

Our products are also finding application in the growing field of biomagnetics. NMR technology is being used in an advanced technique of diagnostic body scanning that offers many advantages over conventional X-ray Tomography. Methods for magnetically controlling gastric bleeding without surgery and for stretching the esophagus in infants born with a congenital malformation known as esophageal artresia have also produced encouraging results.

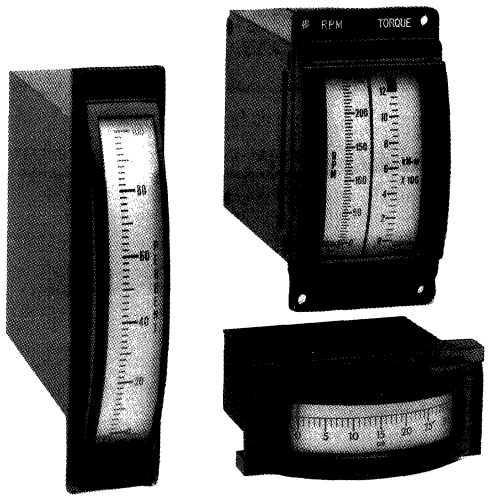
FEATURES AND SPECIFICATIONS ON A FEW SELECTED PRODUCTS

INTERNATIONAL INSTRUMENTS



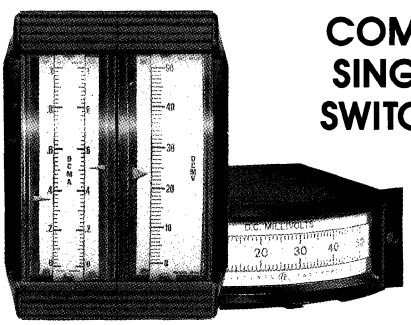
MILITARY SINGLE / DUAL SWITCHBOARD MODELS

All ⁘ military-type meters are suited to applications such as missile control, checkout equipment, and airborne, shipboard, or land-based monitoring installations. In industrial applications, their rugged reliable performance make them a good choice for production and processing equipment operating in environments of shock, vibration, or moisture.

MODELS 2150/2152 meet the applicable requirements of MIL-M-10304 and MIL-M-16034.

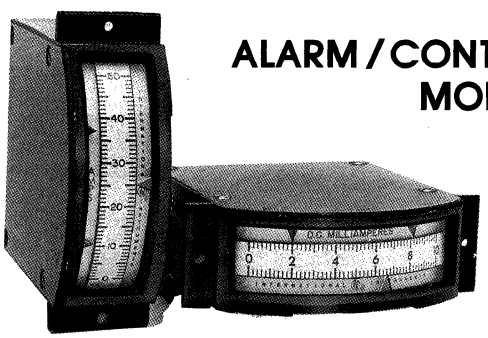
MODELS 1147/1149 also perform well as position indicators on remote control panels, or, with center zero movements, as null indicators.

MODEL 1247 is in family with the Model 1147 / 1149 meters but is a dual meter, designed to permit grouping of two important parameters in a single unit for instant analysis.



COMMERCIAL SINGLE / DUAL SWITCHBOARD MODELS

MODELS 1151/1251 and 1146/1246 were initially developed to meet the demanding specifications of the Atomic Energy Commission with respect to seismic qualifications, long-life and high accuracy. The resulting product line is the most rugged and reliable available. Models 1146 and 1246 are 3½-inch meters, 1151 and 1251 6-inch models, both series of instruments manufactured of modern black plastic with a design compatibility that makes them perfectly suited for use together on the same panel board. Windows are tough clear Lexan®.



ALARM / CONTROL MODELS

MODEL 1139 is an internally illuminated meter that does away with the need for auxiliary visible alarm circuitry.

MODEL 2547/2548 meters offer a wide choice of voltage and current-sensing ranges, as well as optional plug-in or built-in output modifiers to change the mode of control. With a choice of slope or trigger output, ⁘ Control Meters are inherently adaptable to both smooth proportional and straight on-off control. The resulting line of indicating controllers is well qualified to answer the needs of the aerospace, manufacturing, process, and utility industries.

MODELS 2602/2603 indicate, alarm, or provide on/off control for virtually *any* measurable variable that can be represented by an electronic signal.

LAUREL ELECTRONICS, INC.™

The Laureate series provides accurate display and control of analog signals such as DC and AC voltage and current, thermocouples, RTD's, process signals, strain gauges and load cells. Input type and scaling of the input signal to display directly in engineering units to 99,999 counts may be selected by the front panel pushbuttons or via RS-232-C or RS485. The patented method of analog-to-digital conversion allows the meter to make up to 60 conversions per second for fast response in control applications and true peak reading capability. Adaptive filtering provides high noise rejection while responding rapidly to step inputs. Outputs may operate from either the filtered or nonfiltered signal. The meter operates from 85 to 264 Vac and 90 to 370 Vdc to allow use worldwide. Optional alarm outputs, analog output and digital interface convert the Laureate from indicator to system control and interface.

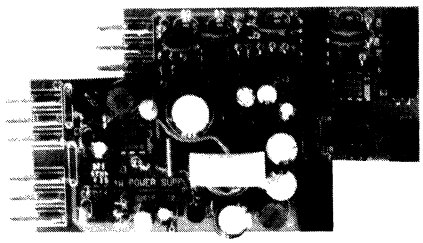
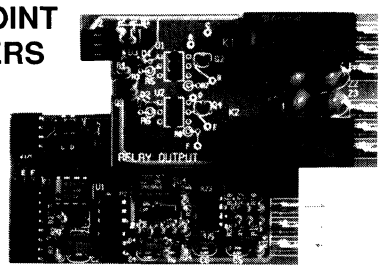
POWER SUPPLIES



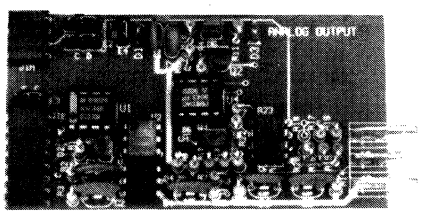
The Laureate series uses high frequency, switching power supplies to provide stable, isolated power for meter operation. Switching power supplies substantially reduce weight of the meter while providing outputs over a broad range of input voltage and frequency. +5 Vdc and –5 Vdc outputs and two isolated excitation power sources are available. The standard power supply operates on power inputs from 85 to 264 Vac, 47 to 440 Hz and from 90 to 370 Vdc. Hence, units may be operated worldwide with the same power supply. The optional low voltage power supply operates from 8 to 28 Vac, 47 to 440 Hz and 9 to 32 Vdc. This allows Laureate to be operated from a variety of batteries or 28 Vac, 400 Hz aircraft power. The isolated excitation supplies provide 12 Vdc at 120 mA and 24 Vdc at 30 mA. These supplies may be used to power the analog output and RS-232-C options or external transmitters and strain gauges. The Load Cell meter converts the 12 V output to a highly stable, accurate 10 Vdc excitation for up to 4 350 Ohm load cells. The supplies are designed to meet UL/VDE safety standards and FCC/VDE EMI requirements.

DUAL SETPOINT CONTROLLERS



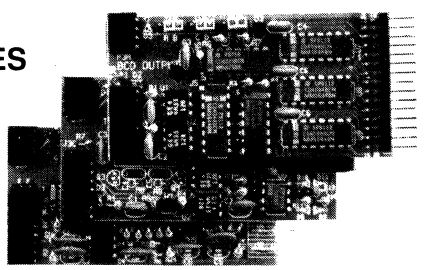
The setpoint control option adds control and alarm capabilities to the Laureate. Two versions are available; the relay board has two Form C, 10 A @ 250 Vac relays and the optically isolated board provides two open collector outputs rated at 30 Vdc and capable of sourcing 30 mA. Outputs may be set to operate above or below the setpoint or disabled. Open collector or relays may be individually programmed to operate in a latching or automatic mode. In the latching mode, when an alarm or shutdown condition is reached, the output remains in the alarm condition until it is manually reset by the front panel pushbuttons or through the rear connector. The output is automatically reset in the nonlatching mode when the alarm condition no longer exists. When operating from the unfiltered input, output response to an alarm occurs within 20 milliseconds. The filtered input reduces the chance of alarms triggering due to noise. Setup selection of 2 to 128 readings prior to updating the output provides a time delay and reduces relay chatter. Setpoint values are entered by front panel pushbuttons or serial interface.

ANALOG OUTPUT



The analog output produces an isolated signal of 4 to 20 mA and 0 to 10 Vdc for chart recorders, computers or transmission to a central control room. The output for thermocouples and RTD's is linearized with the same accuracy as the basic meter. A 12-bit D-to-A converter updates the output 57 times per second with a resolution of .025%. Accuracy of the analog output is .05%. The high update rate allows the output to closely track the input signal. The output may be operated from either the filtered or nonfiltered input. Power is provided by the meter 12 or 24 Vdc excitation supply. Using the 12 V supply, the 4 to 20 mA output can drive loads up to 400 Ohms and up to 1000 Ohms with 24 V. The output is isolated to 500Vp from signal ground and 1500 Vp to power ground, eliminating errors due to ground loops. Scaling of hte output is easily entered by the front panel pushbuttons or RS-232-C or RS-485 interface. The low and high output signals may be set to equal any value from –99,999 to +99,999. This allows the low output to be set to a displayed value either above or below the high output.

DIGITAL INTERFACES



The Laureate offers isolated full duplex RS-232-C or RS-485 communications or 3-state, stored, parallel BCD to interface with computers, PLC's or other digital devices. Laurel provides IBM compatible software with the RS-232-C and RS-485 interfaces to allow simple menu-driven setup of the meter. The information transmitted via RS-232-C and RS-485 includes present signal value, peak signal value and alarm values and status. The RS-485 allows transmission over long distances in noisy electrical environments and is addressable, allowing multiplexing with up to 30 other devices. Baud rates are selectable from 300 Hz to 19,200 Hz. The Laureate may be used as a remote display vai the digital interface; no signal conditioner is required. The parallel BCD has 3-state outputs to allow multiplexing with other meters for data logging. A single line enable is used to address each meter. BCD Hold and Data Ready output simplify interface. Outputs are isolated to 500 Vp from signal ground and 1500 Vp to power ground. The BCD board may be powered by the meter 5 Vdc if no isolation is required.

The true-RMS versions are designed for complex waveforms, such as square waves and rectified or chopped sine waves. The AC-average versions are lower in cost, and display the true-RMS voltage of sinusoidal signals. Both versions allow direct connection and scaling for a 5A current transformer, with no need for an intermediate step-down transformer.

"PRESENTOR" Range of Analog Meters

There are four sizes in the Sifam 'Presentor' range, designated types 19, 29, 39, and 49. The uniquely versatile design enables each size to be displayed in four different modes:

Style 'W' is for back-of-panel mounting with only the scale and pointer visible (types 19W, 29W, 39W and 49W)

Style 'WF' is also for back-of-panel mounting but with a clip-on black bezel (types 19WF, 29WF, 39WF and 49WF)

Style 'M' is for front-of-panel mounting with a snap-on mask in black (types 19M, 29M, 39M and 49M)

Style 'B' is also for front-of-panel mounting but with a snap-on bezel in black (types 19B, 29B, 39B and 49B)

Effective illumination can be provided by back-lighting through the translucent body on types 29, 39 and 49.

APPLICATION

The Presentor Range of meters is suitable for both DC and AC with self contained ranges as follows:

VDC	VAC
50μA — 2A	60μA — 100mA
50mV — 250V	1V — 250V

A NEW SMALL-SPACE MOVEMENT

The taut-band (ligament suspended) movement has a powerful all-new core-magnet incorporating advance materials chosen for high technical performance. The design insures that the calibration of the meters is unaffected when mounted on a steel (ferrous) panel.

The movement is contained within a barrel of minimal volume to reduce the amount of space required behind the panel (please see dimensional drawings).

CONSTRUCTION

The body (or base) is molded from translucent high impact polystyrene with a transparent acrylic front. Mask and bezels are in A.B.S.

SCALES

Standard dial markings are as shown on the meter photographs but special markings can be supplied to customers' requirements.

The meters can be supplied with left-hand, center or right-hand zero. Mirror dials are available on types 29, 39 and 49. The zero adjuster, normally located on the front face, can be located at the rear if required.

ACCURACY

Sifam 'Presentor' meters are supplied in accordance with ANSI C39.1 and BS89: 1977, IEC51.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

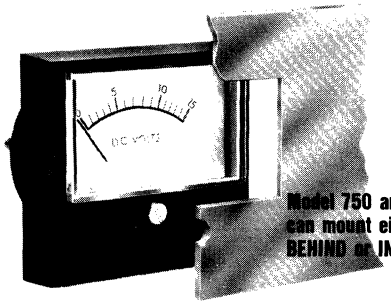
Shurite METERS

Rugged, Low-Cost Indicating Meters and Testers...since 1904

A PRIME TECHNOLOGY COMPANY

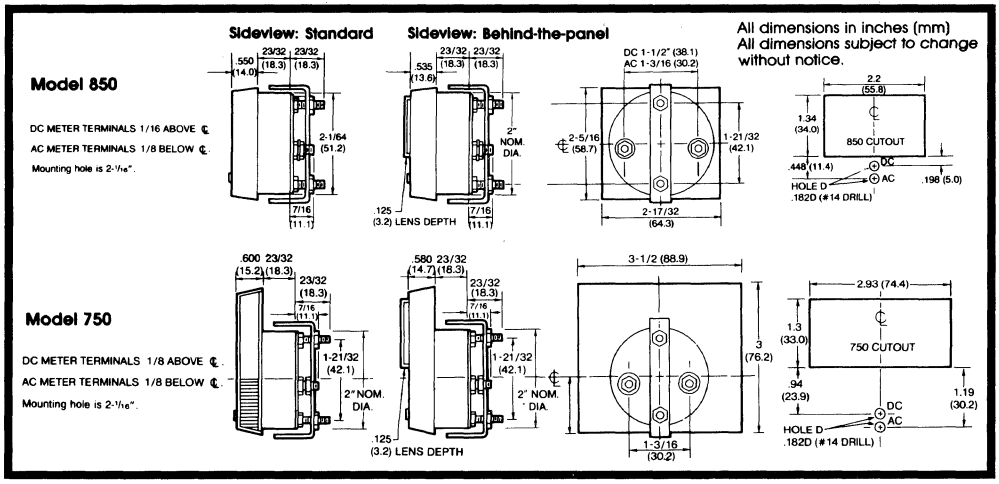
SHURITE WINDOW MOUNT PANEL METERS



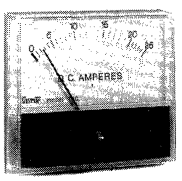
Model 750 and Model 850 Meters can mount either way — BEHIND or IN FRONT of the panel!

These fine meters provide the same reliable performance for which Shurite has been known since 1904... *plus* new mounting flexibility... *plus* that new "textured black" look. Both models are, of course, still available with standard case fronts. Order the "new look" meters as Model 750BP and Model 850BP.

- The redesigned case front provides mounting flexibility and smart "textured black" finish.
- Two sizes — 3½" (Model 750BP) and 2½" (Model 850BP).
- Available either with or without front-access zero adjuster.



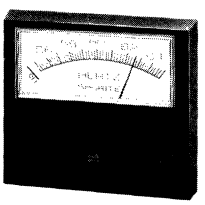
Models 750 and 850 also in Standard Case



Designed with black polystyrene back and clear polystyrene front.

FREQUENCY METER SERIES 7000/8000

Ruggedly designed for lasting performance and engineered for mounting flexibility — either in-front-of-the panel or behind-the-panel



- Expanded scale, lance pointer, zero adjust.
- Off-scale zero position.
- Two convenient sizes — 3½" and 2½".
- High reliability at low cost.
- DIMENSIONS: Refer to engineering drawings of Model 750/850 meters immediately above. Dimensions are identical except for barrel depth which measures 1-13/16" (46.0mm) for both Series 7000 and 8000 instead of 23/32" (18.3mm).

This new low cost approach to frequency measurement employs solid state components ...thereby completely eliminating problems caused by waveform distortion. Line frequencies are monitored and displayed on an expanded scale analog panel meter. Complete system monitoring, of course, requires an appropriate voltmeter and ammeter as companion instruments. Both instruments can be ordered from Shurite and are available from stock.

THRU-PLUG LINE VOLTAGE TESTER

Pocket-size Model 79406-LT. Test the outlets you use in seconds. Simply push in plug, read voltage, and then plug the appliance into the Thru-Plug.

FIVE DIFFERENT SERIES OF SHURITE METERS offer choice of more than 260 standard-range, ±5% accuracy instruments — stocked by your local distributor, backed by complete factory inventories. Moving Magnet DC types or double-vane repulsion, jeweled bearings AC types.
